ABSTRACT

This document presents an annotated listing of the research in science education that was reported during 1997. The listing includes educational research reported through doctoral dissertations and master's theses, journal articles, conference papers, electronic documents, and other items. A listing of institutions where the research was completed is given for dissertations and theses. For journal articles, a list of the journals searched and the number of articles found is included. The 1997 version of this annotated listing represents the first time an attempt has been made to capture a broader range of research listings by incorporating electronic documents available on the World Wide Web and by including articles from journals less familiar to science educators. Each entry in the listing has been assigned major and minor codes representing the topic of the research. An index characterizes the entries by major codes. (WRM)

This document and related publications are available from ERIC/CSMEE Publications, The Ohio State University, 1929 Kenny Road, Columbus, OH 43210-1080. Information on publications and services will be provided upon request. Call 1-800-276-0462.

ERIC/CSMEE invites individuals to submit proposals for monographs and bibliographies relating to issues in science, mathematics, and environmental education. Proposals must include:

- A succinct manuscript proposal of not more than five pages.
 - An outline of chapters and major sections.
 - A 75-word abstract for use by reviewers for initial screening and rating of proposals.
 - A rationale for development of the document, including identification of target audience and the needs served.
 - A vita and a writing sample.
-

This publication was funded in part by the Office of Educational Research and Improvement, U. S. Department of Education under contract no. RR93002013. Opinions expressed in this publication do not necessarily reflect the positions or policies of OERI or the Department of Education.

ERIC and ERIC/CSMEE

The *Educational Resources Information Center* (ERIC) is a national information system operated by the Office of Educational Research and Improvement in the U. S. Department of Education. ERIC serves the educational community by collecting and disseminating research findings and other information that can be used to improve educational practice. General information about the ERIC system can be obtained from ACCESS ERIC, 1-800-LET-ERIC.

The *ERIC Clearinghouse for Science, Mathematics, and Environmental Education* (ERIC/CSMEE) is one component in the ERIC system and has resided at The Ohio State University since 1966, the year the ERIC system was established. This and the other 15 ERIC clearinghouses process research reports, journal articles, and related documents for announcement in ERIC's index and abstract bulletins.

Reports and other documents not published in journals are announced in *Resources in Education* (RIE), available in many libraries and by subscription from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402. Most documents listed in RIE can be purchased through the ERIC Document Reproduction Service, 1-800-443-ERIC.

Journal articles are announced in *Current Index to Journals in Education* (CIJE). CIJE is also available in many libraries, and can be purchased from Oryx Press, 4041 North Central Avenue, Suite 700, Phoenix, AZ 85012-3397 (1-800-279-ORYX).

The entire ERIC database, including both RIE and CIJE, can be searched electronically online or on CD-ROM.

World Wide Web: <http://ericir.syr.edu/Eric/>

Online Vendors: Knight-Ridder Information, Inc. 1-800-334-2564
OCLC (Online Computer Library Center) 1-800-848-5878
Ovid Technologies 1-800-950-2035

CD-ROM Vendors: ERIC Processing and Reference Facility 1-800-799-3742
Silver Platter Information, Inc. 1-800-343-0064

Researchers, practitioners, and scholars in education are invited to submit relevant documents to the ERIC system for possible inclusion in the database. If the ERIC selection criteria are met, the documents will be added to the database and announced in RIE. To submit, send two legible copies of each document and a completed Reproduction Release Form (available from the ERIC Processing and Reference Facility, 1-800-799-3742, or any ERIC Clearinghouse) to:

ERIC Processing and Reference Facility
Acquisitions Department
1100 West Street, Second Floor
Laurel, MD 20707-3598

For documents focusing on science, mathematics, or environmental education, submit two copies of each document, together with a completed *Reproduction Release Form*, directly to:

ERIC/CSMEE Acquisitions

Preface

For many years, the Clearinghouse for Science, Mathematics, and Environmental Education published an annual *Summary of Research in Science Education*, a document that appeared as a special issue of *Science Education*. The *Summary* was intended to facilitate access to research findings and provide a critique of research efforts in science education at one-year intervals. Sort of a "progress report." A variety of factors led to the demise of that *Summary*, but many individuals have continued to express interest in some sort of annual overview of research in science education. For the second year, this publication has been produced in response to those expressions of interest; it presents an annotated listing of research in science education that was reported during 1997. No effort has been made to provide a critical analysis of research reports or areas of research, but we have attempted to identify and accurately describe the science education research reported through doctoral dissertations, journal articles, conference papers, electronic documents, and other items. In the case of dissertations, we have included a listing of the institutions where science education doctoral research was completed, and in the case of journals, we have identified the journals we searched and the number of science education research articles we found.

Though this may not be a comprehensive listing of the science education research reported during 1997, we believe it is the most complete listing available and represents the major trends in science education research. We have attempted to capture a broader range of reports this year by incorporating electronic documents available on the World Wide Web, and by including articles from journals less familiar to science educators. Our hope is that this one-year "snapshot" of research will provide an overview of the field for experienced researchers, doctoral students, and practitioners who use research findings. We will not know if our hope is realized unless those who find this report useful tell us. Though ERIC/CSMEE has the capacity to produce this listing, it is not clear the extent to which a single annotated listing of science education research is valued by the science education community. We earnestly desire feedback, either in writing or by e-mail at the addresses listed below. This listing will also be available through the ERIC/CSMEE World Wide Web site.

Please forward feedback by mail to: Science Education Research Listing, ERIC/CSMEE, 1929 Kenny Road, Columbus, OH 43210-1080; or send e-mail to ericse@osu.edu.

DLH & WSM

Key to Codes

The following topic codes have been used to indicate the major and minor emphases of each dissertation, journal article, paper, or electronic document in this listing. Each entry has been assigned a minimum of one and a maximum of three major codes and maximum of three minor codes. Within the index at the end of the volume, major codes have been used to categorize each publication.

The grade level or educational level of each study is indicated in parentheses after the topic codes. The level codes for teacher education studies may also reflect the grade level(s) at which the interns or teacher participants teach.

Topic Codes

ach	achievement	ene	environmental education	nas	nature of science
alf	alternative frameworks	eqt	equity issues	nfd	nonformal & informal education
asm	assessment	esg	earth & space science/	ntw	networks/
ats	student attitudes		geology		collaboration/
att	teacher attitudes	eth	ethnicity		partnerships
bfs	student beliefs	evo	evolution	pbs	problem solving/
bft	teacher beliefs	fsd	field studies/		science reasoning
bio	biology		outdoor education	ped	pedagogy
bkg	background factors/	gen	gender	phe	philosophy/
	context, social factors	his	history/		epistemology
car	science-related study/		historical implications	phy	physics
	career choice	hos	hands-on science	ref	reform/
cbi	computer-based instruction	inq	inquiry		educational change/
ccg	conceptual change	int	integration, interdisciplinary		standards
che	chemistry	kns	student knowledge	rem	representation/
chs	student characteristics	knt	teacher knowledge		modeling
cht	teacher characteristics	lab	laboratory	res	research/
cid	classroom interactions/	lit	science literacy		review of research/
	discourse interaction	lrg	learning/		conference proceedings
cns	constructivism		comprehension	sks	student skills
cpl	cooperative learning/	lsy	learning style/	skt	teacher skills
	group work		cognitive style	sts	science, technology, & society
cul	cross-cultural studies	lth	learning theory	tec	technology
cur	curriculum	mat	materials, equipment	tpd	teacher professional development
edt	educational technology	mce	multicultural education/		
			bilingual education		

Level Codes

AD	adult
EC	early childhood, PreK-4
EL	clementary, K-8
MS	middle school
SE	secondary, 5-12
HS	high school, 9-12
PS	post secondary, 13-
K-12	all school levels
ALL	all student levels
TE	teacher education, teachers
GEN	general interest

Further Elaboration of Selected Codes

In some cases, the codes we have used to group items may not correspond to the more precise terminology often used within the science education discourse community. To aid readers in making a match between the codes we have used and some common areas of research, we offer a further elaboration of codes on the next page. The codes we have used are indicated on the left, and the categories they represent include the topics listed on the right.

Elaboration of Codes

ach	achievement, grades, academic success
ats	student attitudes, mental state, interest, motivation, efficacy
bfs	student beliefs, perceptions, views
bkg	background, context, including social or economic factors, past experience, family interest or background, environment, rural vs. urban
cbi	instruction by computer programs or simulations
chs	student characteristics, including creativity, at-risk behaviors, physical disabilities, learning disabilities, giftedness
cid	classroom interaction, discourse interaction (not necessarily classroom), conversational analysis studies
cul	comparison of cultural factors, not simply a study of another culture
edt	educational technology, design of software, instructional technology other than computers, distance education, multimedia education
eqt	equity issues, power issues
int	integration, interdisciplinary issues, including thematic education
kns	student knowledge, cognitive structures, mental constructs, system of constructs
lrg	learning, comprehension
lth	learning theory in a more general sense than <i>lrg</i>
mat	print or electronic materials, other media, equipment and supplies
mce	multicultural education, including bilingual education
ntw	networks; collaborations between students, teachers, schools; partnerships; mentoring programs
res	research as a topic of study, review of research, including conference proceedings
tec	technology as a topic of study, technology education, engineering

Acronyms Used

The following acronyms appear without definition in abstracts throughout this volume:

AAAS	American Association for the Advancement of Science
CAI	Computer Assisted Instruction
GPA	Grade Point Average
NAEP	National Assessment of Educational Progress
NCTM	National Council of Teachers of Mathematics
NRC	National Research Council
NSF	National Science Foundation
NSTA	National Science Teachers Association
SS&C	Scope, Sequence & Coordination
STEBI	Science Teaching Efficacy Beliefs Instrument
STS	Science, Technology, Society
TIMSS	Third International Mathematics & Science Study

Dissertation Research Reported in 1997

Suzanne Shaw Drummer, *The Ohio State University*

Chris A. Ingersol, *The Ohio State University*

Joyce C. Miller, *The Ohio State University*

This section lists 310 dissertations and master's theses in science education research that were completed in 1997 and abstracted in Dissertation Abstracts International during 1997 through January 1999. Each entry is coded (see Key to Codes) with one to three major codes (in bold type), a maximum of three minor codes, and an indication of educational level (in parentheses). When the level code of "TE" is used to refer to teacher education, a second level code may be added when appropriate to indicate the grade level at which the intern or teacher teaches. All entries are indexed by major codes at the end of the volume (see page 103). An index of dissertations by institution is included at the end of this dissertations section (see page 45).

Abbas, Abdullah Othman. (1997). *The teacher's role in college level classes for non-science majors: A constructivist approach for teaching prospective science teachers* (The Florida State University). DAI-A 58(07), p. 2508, 1998. [AAT9802184]

This interpretive study used ethnographic methodology to reveal how an exemplary college chemistry instructor used constructivism as a referent for his teaching and the learning of his students. The instructor switched metaphors as he created conducive learning environments to help facilitate the prospective teachers' enjoyment of their learning journey.

cns, ped, che, tpd (TE, PS)

Abrams, Robert H., Jr. (1997). *Professional isolation and connection among high school science teachers in upstate New York* (Cornell University). DAI-A 58(05), p. 1660, 1997. [AAT9728395]

This study reports that in a survey of practicing teachers, "Lack of Time" was the most frequently cited source of professional isolation, and "Friendship" was the most frequently cited source of professional connection. Productive relationships at the state level were higher than expected.

ntw, bft, tpd (TE, HS)

Adams, April Dean. (1997). *Students' beliefs, attitudes, and conceptual change in a traditional and a constructivistic high school physics classroom* (University of Houston). DAI-A 58(08), p. 3069, 1998. [AAT9803561]

In this study, the relationships between student beliefs about the nature of science, student attitudes, and conceptual change about the nature of forces were investigated within a traditional and within a constructivistic high school physics classroom.

cns, ats, ccg, bfs, nas, phy (HS)

Adrian, Brian Wayne. (1997). *Using multimedia to teach college students the concepts of electricity and magnetism* (The University of Nebraska - Lincoln). DAI-A 58(08), p. 3095, 1998. [AAT9804321]

In an introductory college physics class, multimedia lessons based on the Karplus learning cycle were found to be effective in helping a majority of the students to better understand eight topical categories relating to the concepts of electricity and magnetism.

edt, ped, lth, phy (PS)

Ahern, Kathryn A. (1997). *Quest for learning: A study of teachers' perceptions of the Satellite Education and Environmental Research program* (The University of Nebraska - Lincoln). DAI-A 58(12), p. 4604, 1998. [AAT9819687]

This study examines the perceptions of teachers who participated in the Satellite Education and Environmental Research (SEER) Program Water Project, a distance education course developed at the University of Nebraska-Lincoln. The central finding that emerged was the changed focus of teaching science more thematically.

edt, cur, ene, bft (TE)

Al-Momani, Ibrahim Abdalla. (1997). *A study of teacher inservice in Jordan using an inservice approach developed for teachers in the United States* (The University of Iowa). DAI-A 58(05), p. 1660, 1997. [AAT9731758]

Jordanian teachers seemed to understand and enthusiastically embrace basic constructivist ideas promoted in the adapted version of the Science PALs inservice. Contrary to custom, students were observed asking more questions, requesting more activities and science time, and engaging in science discussions.

tpd, cns, att (TE)

Alao, Solomon. (1997). *Predicting fifth-grade students' understanding of ecological science concepts with motivational and cognitive variables* (University of Maryland College Park). DAI-A 58(09), p. 3412, 1998. [AAT9808575]

Results of this study indicate that prior knowledge, interest, learning goals, and strategy use should be included in a theoretical model's design to explain and to predict fifth grade students' understanding of ecological concepts.

kns, ene, ats, gen (MS)

Aldrich, Lynn Karter. (1997). *Effects of physical science courses which emphasize content or process on efficacy beliefs of preservice elementary teachers* (Temple University). DAI-A 58(10), p. 3877, 1998. [AAT9813475]

Using the STEBI-B instrument as a pretest and a posttest, science teaching efficacy beliefs of preservice elementary teachers were compared. Results show an increase in the self-efficacy subscale for those teachers taking the process oriented course concurrently or after having completed a science methods course.

att, tpd, phy (TE, EL)

Ann, Elizabeth Ann. (1997). *Case studies of curriculum implementation in science classrooms* (University of California, Riverside). DAI-A 58(08), p. 2979, 1998. [AAT9804255]

The purpose of this research was to detail what has been implemented as the secondary school science curriculum, and what the major influences were on

its development. To do so, this study looked at how teachers translated curriculum influenced by specific policy documents into classrooms.

cur, ped (HS)

Allen, D'Maris Anne Lumpkin. (1997). *The effects of computer-based multimedia lecture presentations on community college microbiology students' achievement, attitudes and retention* (The University of Texas at Austin). DAI-A 59(02), p. 0448, 1998. [AAT9824854]

This quasi-experimental study (n=76) showed that there was no significant difference between the two groups in the areas of achievement and retention. The computer-based multimedia group did show significantly higher positive attitude scores than the traditional lecture group.

edt, ach, ats, bio, ped (PS)

Almazroa, Hiya Mohammed. (1997). *Analysis of Saudi Arabian middle and high school science teachers' conceptions of the nature of science* (University of Southern California). DAI-A 58(11), p. 4169, 1997. [AAT9816006]

The study (n=786) revealed that Saudi science teachers hold numerous misconceptions about the nature of science (NOS) with a significant difference in understanding between the male and female teachers. Teachers with a major in physics held more adequate views than did teachers with other majors. Novice teachers were found to have more adequate conceptions of the NOS than did experienced teachers.

nas, bft, knt (TE, SE)

Anaam, Mahyoub Ali. (1997). *The academic and nonacademic characteristics of science and nonscience majors in Yemeni high schools* (Syracuse University). DAI-A 58(12), p. 4604, 1998. [AAT9819121]

Science majors had higher degrees of curiosity in science, higher levels of interest in science during high school, higher tendencies to believe that their majors will help them to find a potential job in the future, higher degrees of achievement in science subjects, and rated their math teachers higher than did nonscience majors.

ats, chs, car, bfs (HS, PS)

Anderson, Catherine Ann. (1997). *Comparison of teacher-directed and student-directed journals on achievement in college chemistry* (The University of Texas at Austin). DAI-A 58(07), p. 2589, 1998. [AAT9802816]

This research used written student journals as a means to improve academic achievement in a course designed for nonscience majors. Although there was no benefit in terms of academic achievement or conceptual and algorithmic problem solving success, students using the student-directed format held more positive opinions toward this type of journal.

ped, ats, che, ach (PS)

Armstrong, Kerri Lynn. (1997). *World views: Their nature and function in the biology classroom* (University of Minnesota). DAI-A 58(03), p. 0805, 1997. [AAT9724162]

This investigation revealed that 22 community college students did not view themselves as part of science or nature. The investigation also found students' views of the self, nonself, relationships and causality affected their learning and apprehension of key biological concepts.

bio, lth, bfs, lit (PS)

Armstrong-Hall, Judy Gail. (1997). *An examination of gender bias on the eighth-grade MEAP science test as it relates to the Hunter-Gatherer Theory of Spatial Sex Differences* (Wayne State University). DAI-A 58(03), p. 0836, 1997. [AAT9725812]

This study reports that the Hunter-Gatherer Theory of Spatial Sex Differences appeared to be able to predict that males could perform better on problems involving mental movement and females could perform better on problems involving the pattern recall of unconnected items.

gen, sks, pbs (MS)

Barrett, Martha Cohen. (1997). *Science and engineering students' classroom experiences: An analysis by gender and discipline* (The University of Michigan). DAI-A 58(02), p. 0394, 1997. [AAT9721943]

Based on a concern about the persistence of women in science-related disciplines, this study examines whether science and engineering students' classroom

experiences and the importance students attributed to their experiences differed by gender and discipline.

gen, bkg, car, tec, bfs, ats (PS)

Beck, Diana Pyse. (1997). *Interpretive video analyses of children's inquiry: Fantasy and other emergent contexts at a summer science camp for elementary school children* (University of Illinois at Urbana-Champaign). DAI-A 58(06), p. 2140, 1997. [AAT9737049]

Several new constructs for investigating children's learning in science are proposed in this study, including a construct or a unit of study for analyzing children's learning called 'spheres of activity.' Also, the way children use tasks or develop tasks out of the projects assigned by teachers was examined.

inq, lth, cns (EL)

Bednarski, Marsha H. (1997). *Constructivism and the use of performance assessment in science: A comparative study of beliefs among preservice and inservice teachers* (The University of Connecticut). DAI-A 58(08), p. 2979, 1998. [AAT9806163]

This study identified whether preservice and inservice teachers differed with respect to their beliefs about constructivist-based learning strategies and performance assessment. It also identified whether teacher beliefs held about constructivist-based learning strategies were related to the construction of assessments they developed for use in their classrooms.

cns, asm, ped, bft, tpd (TE)

Beilby, Jerry Paul. (1997). *The construction of students' knowledge of ecological concepts through the use of structured controversy compared to individual study* (University of Minnesota). DAI-A 58(02), p. 0417, 1997. [AAT9721611]

Change in the quality of knowledge propositions was compared between the two groups. No significant differences were observed for targeted ecological concepts. The control group showed a significant decrease in the number of correct non-target propositions and an increase in number of incorrect non-target propositions based on pre- to post-treatment data.

cpl, enc, ped, ccg, ats (PS)

Bennett, Bathsheba Yvette. (1997). *Metaphor and curriculum theorizing in environmental studies* (Temple University). DAI-A 58(03), p. 0714, 1997. [AAT9724211]

Argues that if metaphor, such as Kliebard's proposed metaphor, is to inform curriculum theory toward program development in environmental studies, then the domain of environmental studies must be constrained to permit development and accurate transmission of visual imagery appropriate to the domain.

ene, cur (TE)

Blaine, Lloyd Frank. (1997). *Student achievement in an integrated math/science curriculum and a math only curriculum* (Texas Woman's University). MAI 36(01), p. 0032, 1998. [AAT1386376]

Two groups of fifth graders were tested after one group was exposed to a curriculum of mathematics and science while the other was exposed to a mathematics only curriculum. A t-test showed no significant difference between the two classes, but the scores of the experimental group did show a significant difference between the pre- and posttest.

int, ach, cur (MS)

Blank, Lisa M. (1997). *Metacognition and the facilitation of conceptual and status change in students' concepts of ecology* (Indiana University). DAI-A 58(08), p. 3069, 1998. [AAT9805379]

This study explores the relationship between metacognitive teaching strategies, status, and conceptual change during a three month unit on ecology. Students began to understand the value of critically investigating ideas before incorporating them into their knowledge structures.

ped, ccg, kns, lrg (MS)

Blue, Jennifer Marie. (1997). *Sex differences in physics learning and evaluations in an introductory course* (University of Minnesota). DAI-A 58(08), p. 3069, 1998. [AAT9804710]

When college students were matched according to their high school background and their physics pretest scores there was no gender differences in their post-test scores. Women liked the relevant aspects of the course more than men did.

gen, lrg, bkg (PS)

Boedecker, Martha Elaine. (1997). *What influences science teaching? A study of three novice rural science teachers* (Oklahoma State University). DAI-A 59(02), p. 0448, 1998. [AAT9824408]

This study showed that science courses had a major effect on teachers. If the National Science Education Standards are adopted, science teachers would not have to wait until their science methods courses to be exposed to the practices recommended by the National Research Council.

tpd, ref, ped (TE)

Bowers, Richard M. (1997). *The impact of introductory science and English courses on the level of logical thinking of community college students* (Texas A&M University-Commerce). DAI-A 58(08), p. 2974, 1998. [AAT9806307]

The GALT pretest was a significant predictor of logical-thinking skills in each of the entry-level courses of physics, chemistry, biology, or English in six public community colleges representing differing geographical regions of Texas.

pbs, sks, phy, che, bio (PS)

Bradford, Cristine Schoneweg. (1997). *A case study of change in conceptions and practices of prospective science teachers during field experiences* (The Pennsylvania State University). DAI-A 58(12), p. 4617, 1998. [AAT9817433]

This was a qualitative study of the experience of two prospective science teachers. Results imply that field experiences must explicitly attempt to facilitate student teacher development towards critical ways of thinking about science-specific pedagogical conceptions and practices.

tpd, fsd, ped, bft (TE, HS)

Brandes, Aaron Andre. (1997). *Seeds of science practice: Parallels between the science thinking and activities of sixth-grade children and professional scientists* (Massachusetts Institute of Technology). DAI-A 59(06), p. 1969, 1998. [Not Available from UMI]

Data for this study was collected during six months of research in a sixth-grade classroom. Themes from the history, philosophy and sociology of science were

used to identify the similarities and differences of children's and scientists inquiry practices.

inq, lth, nas (MS)

Broadway, Francis Sylvester. (1997). *Student teachers' sense-making of an instructional ecology*. (University of South Carolina). DAI-A 58(11), p. 4191, 1998. [AAT9815484]

This microethnographic study found that since student teachers do not volunteer explanations for why teachers do what they do without explicit prompting, they need opportunities to engage in discourse which facilitates and encourages the dynamic process of sense-making.

tpd, cid (TE, EL)

Brown, Ellen Jean-Elizabeth. (1997). *The effects of extended block scheduling on math and science achievement in Missouri and Illinois high schools* (Saint Louis University). DAI-A 58(08), p. 3075, 1998. [AAT9803755]

The study compared the ACT math and science average scores of a senior class who participated in a traditional schedule, with the scores of a later graduating class, in that same school (n=28), who participated in an extended block schedule. The only significant difference was found in the science scores of girls who participated in block scheduling.

ach, ped, gen, ref (HS)

Brownstein, Erica Marie. (1997). *Interaction between assessment and instruction in science: A teacher's decision-making process* (The Ohio State University). DAI-A 58(10), p. 3877, 1998. [AAT9813228]

This research examined a chemistry teacher in an AP class in a Midwestern urban setting interactively assessing his students and determined how knowledge gained during that assessment affected his instructional decision-making.

asm, ped, che, cns, bft (HS)

Bryan, Lynn Ann. (1997). *A case of learning to teach elementary science: Investigating beliefs, experiences, and tensions* (Purdue University). DAI-A 58(12), p. 4605, 1998. [AAT9818925]

This study examined how the beliefs and experiences of a preservice elementary teacher within the context of reflective science teacher education influenced the development of her professional knowledge. The findings indicated that reframing is crucial to developing professional knowledge.

Dieck, Patricia Ann. (1997). *The effect of a newsletter on children's interest in and attitude toward science* (Arizona State University). MAI 35(04), p. 0939, 1997. [AAT1384031]

Middle school subjects used two issues of an interdisciplinary newsletter providing a connection to Mars missions. Students' attitudes toward science did not significantly decline. Students' interest in science declined with statistical significance, but the decline was not educationally meaningful.

int, ats, mat, esg, sts (MS)

Dinucci, Jane R. (1997). *Science reform movements and their effects on teachers' knowledge, curriculum development and instruction* (The Claremont Graduate University). DAI-A 58(08), p. 3070, 1998. [AAT9805054]

Secondary science teachers were surveyed to determine how informed they were about the six prominent science reform movements in the USA. Most of the responding secondary science teachers were not aware of five of the science reform movements. Implementation of reform proposals appeared to be only loosely connected to the teachers' awareness of the reform movements.

ref, knt, cur (TE, SE)

Doby, Janice Kay. (1997). *Teacher content knowledge in the context of science education reform* (Florida Atlantic University). DAI-A 58(02), p. 0425, 1997. [AAT9722612]

The purpose of this study was to examine the effects of an experimental elementary science methods course, which employs the use of laser videodisk technology along with instructional practices suggested by cognitive science and instructional design, on preservice teacher gains in Earth and physical science content knowledge and locus of control in science.

tpd, edt, knt, att, ref (TE, EL)

Donald, Cathery Nolan. (1997). *The impact of the inclusion of students with handicaps and disabilities in the regular education science classroom* (Auburn University). DAI-A 58(07), p. 2590, 1998. [AAT9802446]

Results from surveys indicated that multiple changes occur in the opportunities presented to regular education students when students with handicaps and disabilities are included in the regular science classroom. These include the omission of lab activities and problems with higher order thinking skills.

chs, eqt, ped, lab, pbs (K-12)

Doster, Elizabeth Christina Tsamas. (1997). *Values, dissection, and school science: An inquiry into students' construction of meaning* (University of Georgia). DAI-A 58(03), p. 0805, 1997. [AAT9726941]

Findings indicate students' perception of the dissection experience were contingent on the consistency (or lack thereof) of their personal value systems with the underlying factors found in each of four dimensions of dissection (moral, epistemological, physical aversion, and familiarity).

ats, bfs, lab, kns, bkg, bio (HS)

Draper, Franklin Gno. (1997). *Recalling academic tasks* (The University of Arizona). DAI-A 58(04), p. 1196, 1997. [AAT9729451]

This study focused on what students remembered about five middle school science tasks when they were juniors and seniors in high school. Authentically situated tasks were remembered much better than routine school tasks.

lrg, kns, ped (HS)

Drori, Gili S. (1997). *The national science agenda as a ritual of modern nation-statehood: The consequences of national 'Science for National Development' projects* (Stanford University). DAI-A 58(07), p. 2872, 1998. [AAT9802024]

This study was a comparative investigation of the ways by which the globalization of modern science affects the characteristics of different nation-states. Science should also be regarded as a general cultural framework, which is highly institutionalized at the global level.

nas, phe (GEN)

Dube, Amos Mqiniseli. (1997). *The perceptions of standard five pupils regarding technology* (University of Pretoria). DAI-A 58(11), p. 4197, 1998. [Not Available from UMI]

The study recommends that a program be designed and implemented to sustain and promote the positive perceptions that pupils have of technology throughout their school years.

ats, car, tec (HS)

Dundis, Stephen Paul. (1997). *Varying the learning functions of graphics within a video-formatted astronomy lecture: Effects on recall, comprehension, and perceived mental effort* (The University of Iowa). DAI-A 58(12), p. 4622, 1998. [AAT9819932]

The informative graphic treatment had positive effects on learning. Additionally, there was strong evidence that these positive effects extended with equal force to both recall and higher order comprehension.

Ford, Brenda Jordan. (1997). *The perception of science department chairs regarding the performance of community college science majors transferring to 4-year institutions* (The University of Alabama). DAI-A 58(06), p. 2043, 1997. [AAT9735701]

Results showed that chairs perceived significant differences in native and transfer students. The differences found became greater as the size of the institution increased and became less the greater the number of transfer students attending an institution.

att, bft, bkg (PS)

Foster, John Curtis. (1997). *The relationships between integration strategies and student achievement scores in science among the non-college bound in Pennsylvania* (The Pennsylvania State University). DAI-A 58(07), p. 2616, 1998. [AAT9802633]

The purpose of this study was to explore the relationship between the perceived level of integration between science and vocational subject areas and scores on the NAEP. Results indicate that the use of vocational methodologies helped students consistently score higher.

ach, ped, int, gen, cur (HS)

Freedman, Robin Lee Harris. (1997). *Assessment practices of Iowa science teachers from a constructivist perspective* (The University of Iowa). DAI-A 58(08), p. 0001, 1998. [AAT9805670]

Science teachers in Iowa's SS&C program had different perceptions regarding grading philosophies and the use of traditional and non-traditional assessments than those of other Iowa science classrooms. Also, SS&C students perceived that they had an active role and voice in assessment.

bft, asm, cns, ats (TE)

Freund, Judith Ann. (1997). *Landscapes of promise: An examination of students' journals written during a cross-cultural wilderness experience* (University of St. Thomas). DAI-A 58(04), p. 1237, 1997. [AAT9730416]

The examination of the journals focused on the following areas: aesthetic 'peak' experiences; spiritual inspiration derived from experiences in nature; attitudes toward the preservation of wildlife; and environmental ethics.

mce, fsd, ats, int, nfd, bkg (HS)

Gabel, Dorothy. (1997). *Gender issues in graduate science success* (Indiana University). DAI-A 58(09), p. 3463, 1998. [AAT9810781]

Female students perceived their working environment more negatively than males. The science department with the highest overall graduate student attrition rate also had a smaller percentage of female students and faculty, and was seen by female students, but not by male students or by faculty, as a less supportive environment.

gen, car, ats, att (PS)

Gardner, William Ryland, III. (1997). *Ecological field research and environmental education* (Prescott College). MAI 36(01), p. 0032, 1998. [AAT1386740]

Ecological field research in the context of this paper refers to short (1-7 day) field research projects involving students. The justification for using field research is examined and examples of its application are provided. The uses of field research are related to the five objectives of EE set forth by the Tbilisi Declaration (1978).

fsd, ene, ped (ALL)

Gavin, Andrea Robin. (1997). *Increasing students' retention of science vocabulary using music* (Texas Woman's University). MAI 35(05), p. 1130, 1997. [AAT1384838]

Even though results show no significant differences in mean scores for the groups, the scores of the treatment group showed less of a decrease than scores for the control group after one month.

int, ach, esg, bkg (EL)

George, Rani. (1997). *Multivariate latent variable growth modeling of attitudes toward science: An analysis of the longitudinal study of American youth* (University of Delaware). DAI-A 58(07), p. 2614, 1998. [AAT9800025]

Results of the multivariate model showed that over the middle and high school years, changes in attitudes toward science were positively related to changes in attitudes about the utility of science.

ats, nas, bkg, cht (SE)

Gillespie, Katherine Beattie. (1997). *Water canaries' effect on student knowledge and attitude toward aquatic resources* (University of Louisville). MAI 36(01), p. 0032, 1998. [AAT1387077]

From both qualitative and quantitative measures, the researcher concluded that this activity of the Kentucky Department of Fish and Wildlife's Aquatic Education Program had a positive effect on both the attitude and knowledge of sixth graders who participated in the program.

ats, kns, nfd, ntw, ene (MS)

Giuliano, Frank Joseph. (1997). *The relationships among cognitive variables and students' problem-solving strategies in an interactive chemistry classroom* (Syracuse University). DAI-A 59(01), p. 0125, 1998. [AAT9821612]

Results indicate that students who had similar cognitive profiles often used similar problem-solving strategies when individually solving problems. Students exhibited considerable changes in the relative frequencies of their problem-solving strategy use over three instructional units.

pbs, kns, ped, che, lsy (HS)

Glenn, Janie Marble. (1997). *An analysis of the effect of intensive instruction on chemistry achievement and mental development of students in a summer bridge program* (University of Pittsburgh). DAI-A 58(06), p. 2141, 1997. [AAT9735955]

The subjects' high school mathematics grade averages were more significantly related to their performance and achievement in the chemistry course than were composite SAT scores, high school grade point averages or science grades. The short-term intensive instruction affected two types of growth: "learning" and "development."

che, ach, lrg (PS)

Goebbel, Brenda. (1997). *Lessons on electromagnetic fields: An evaluation of research, policy, and public concern for use in high school science courses in southeastern Michigan* (Eastern Michigan University). MAI 36(02), p. 0497, 1998. [AAT1387285]

This study evaluated current research on and public attitudes toward electromagnetic fields and incorporated this information into classroom lessons to be used when teaching electricity, magnetism, and the electromagnetic spectrum to high school students.

phy, sts, cur (HS)

Goldsmith, Dennis Arthur. (1997). *The influence of the implementation of a science reform initiative: Teachers' perceptions and development of levels of concerns* (The University of Alabama). DAI-A 58(06), p. 2078, 1997. [AAT9735704]

The study revealed that teachers developed higher levels of concern with continued staff development. Teachers who experienced continued staff development reported higher levels of expertise in using the science modules and increased use of the science modules.

tpd, skt, ref, att, hos (TE, EL)

Golley, Pricilla Sue. (1997). *An investigation of teachers' perceptions and implementation of interdisciplinary mathematics and science* (Georgia State University). DAI-A 58(08), p. 3071, 1998. [AAT9804386]

Participants believed that interdisciplinary curricula require changes in technique or approach toward teaching and are valuable in presenting 'real world' problems to students. Levels of discomfort were believed to be due to unfamiliarity with content, working in teams, and with the process of interdisciplinary teaching and learning.

Gordin, Douglas Norman. (1997). *Scientific visualization as an expressive medium for project science inquiry* (Northwestern University). DAI-A 58(11), p. 4242, 1998. [AAT9814216]

Using videotapes of group interactions, software logs, and students' work, the study examined students' representational and inquiry strategies. By creating the visualization the students engaged in a process of meaning-making that included

interweaving prior experiences and beliefs with the representations they are using.

rem, edt, inq, cpl, bio, bfs (HS)

Gray, Derek John. (1997). *Mathematics and science in South Africa: An international achievement study at junior secondary level* (University of Pretoria). DAI-A 58(11), p. 4214, 1998. [Not Available from UMI]

South African students displayed a poor mastery of fundamental processes and of number sense in mathematics, although the curriculum covered a reasonable range of the TIMSS question fields. In the sciences, a lack of understanding of fundamental concepts and problem solving abilities was displayed.

res, ach, cur, ref, ped (MS)

Griffin, Georgia Inez Hunt. (1997). *Informal schooling and problem-solving skills in second-grade science: A naturalistic investigation* (Widener University). DAI-A 59(04), p. 1055, 1998. [AAT9829299]

The purpose of this study was to explore how 15 African American children solved problems in second grade science. Their ability to observe, classify, recall, and perceive space/time relationships was assessed. Think-aloud protocols were used for this examination.

pbs, eth, bkg, lsy (EL)

Griffin, Leslie Little. (1997). *Relationships among selected physical science misconceptions held by preservice elementary teachers and four variables: Formal reasoning ability, working memory capacity, verbal intelligence, and field dependence/independence* (The University of Mississippi). DAI-A 58(04), p. 1249, 1997. [AAT9729776]

The variables of formal reasoning ability and verbal intelligence were identified as having significant relationships, both individually and in combination, to the dependent variable of selected physical science misconceptions.

phy, alf, cht, tpd, ccg (TE, EL)

Gruner, Heidi Mauk. (1997). *A study of the cognitive and affective impact of the cockpit physics curriculum on students at the United States Air*

Force Academy (Kansas State University). DAI-A 58(06), p. 2142, 1997. [AAT9736732]

This study attempted to determine whether an interactive student-centered environment provided the social context and community for learning needed by students who do not traditionally pursue a career in science.

phy, ped, cpl, cbi, int, gen (PS)

Hall, Linda R. (1997). *Mathematics and science achievement in adolescence: The effects of life course goals and self-concept* (University of Toronto). MAI 36(06), p. 1447, 1998. [AATMQ28710]

Mathematics self-concept, academic self-concept, and time on mathematics were consistently significant predictors of mathematics and science achievement for the full sample (n=522) of high school students. The patterns varied somewhat by gender and educational experience.

ach, bfs, ats, bkg, gen (HS)

Hamilton, Laura S. (1997). *Construct validity of constructed-response assessments: Male and female high school science performance* (Stanford University). DAI-A 58(07), p. 2614, 1998. [AAT9802050]

This study investigated the validity of multiple-choice and constructed-response science items from the National Education Longitudinal Study of 1988. Identifying characteristics of items that exhibited gender differences was a priority. This study showed the value of a careful validity evaluation, and that differences among items within a format may be as large or larger than differences between formats.

Hsu, Shih-Jang. (1997). *An assessment of environmental literacy and analysis of predictors of responsible environmental behavior held by secondary teachers in Hualien County of Taiwan* (The Ohio State University). DAI-A 58(05), p. 0001, 1997. [AAT9731641]

Based on the Hines and the Hungerford and Volk models and the environmental literacy framework proposed by the Environmental Literacy Assessment Consortium, this study determined the contributions of nine variables in teachers' environmental responsibilities. Implications for environmental education program development and instructional practice are presented.

ene, tpd (TE)

Hsu, Ying-Shao. (1997). *Development and formative evaluation of an instructional simulation of adiabatic processes* (Iowa State University). DAI-A 58(11), p. 0001, 1998. [AAT9814652]

This research examined university students' conceptual development, problem solving and transfer in a beginning meteorology course. A serious weakness in students' problem-solving skills was revealed as well as the value of the computer-based simulated environment for revealing those weaknesses.

cbi, pbs (PS)

Hsueh, Tung-Guang. (1997). *Teachers' beliefs about the role of socially relevant issues in teaching the nature of science* (The Ohio State University). DAI-A 58(10), p. 0001, 1998. [AAT9813274]

Results show that high school teachers used socially relevant issues to teach the tentative nature of science, the role of individual scientists in validating scientific knowledge and the social aspects of science. The role of scientific communities in validating scientific knowledge was often neglected in the classroom.

bft, nas (TE)

Huntley, Mary Ann. (1997). *Integrated mathematics and science education in the middle grades: Theory and practice* (University of Maryland College Park). DAI-A 58(09), p. 0001, 1998. [AAT9808616]

This research addresses the ill-defined nature of the phrase "integrated mathematics and science education." A conceptual framework gives clarity and precision to this phrase. Discussed are: transition from a separated to an integrated approach, teacher preparation, and different conceptions of each discipline.

int, tpd (MS)

Huong, Tran Thi Thien. (1997). *A combination of physics lectures and demonstrations using the learning cycle in physics teaching at the College of General Studies, National University of Ho Chi Minh City* (Simon Fraser University). MAI 36(03), p. 0675, 1998. [AATMQ24255]

The pilot teaching of the design was implemented to investigate how well students understand concepts and principles of physics, their perceptions of applying these principles into technology, as well as their attitudes toward studying physics.

kns, phy, ats, bfs, tec (PS)

Hurd, David William. (1997). *An analysis of the critical other versus the catalytic agent in novel instructional resources* (Cleveland State University). DAI-A 58(05), p. 0001, 1997. [AAT9732751]

For second grade students (n=394) the classroom teacher was favored at novel instructional sites. It is recommended that nonformal science sites provide training for teachers to lead their own classes through the site in order to reduce the distractiveness of the novel setting.

nfd, tpd (TE)

Hyde, Michelle Smoot. (1997). *A case study of undergraduate female students majoring in math, science and engineering: An analysis of persistence and success* (The University of Utah). DAI-A 58(10), p. 0001, 1998. [AAT9812969]

This study identified critical factors which contributed to female persistence in math, engineering, and science education. The study recommends collaborative learning processes and teaching methods, cohort involvement and study groups, professorial associations with students and internship and lab programs.

car, gen, ntw, cpl (TE)

Jacek, Laura Lee. (1997). *Gender differences in learning physical science concepts: Does computer animation help equalize them?* (Oregon State University). DAI-A 58(05), p. 0001, 1997. [AAT9734840]

In testing 332 university students, this study identified gender differences using three experimental treatments: animation, static graphics, and verbal instruction. Results showed that animation was better than static graphics in improving women's long-term learning, but not significant in short-term learning.

gen, lrg, cbi (PS)

Jelinek, David John. (1997). *Student perceptions of the nature of science and attitudes towards science education in an experiential science program* (University of California, Santa Barbara). DAI-A 58(09), p. 0001, 1998. [AAT9809631]

A six-week course using experiential learning was devised and delivered to 20 high school students. A model of nature of science enhancement was

proposed: engagement in meaningful, extended activities; student accountability for active participation and reflectiveness; and emphasis of high interest values.

O'Connor, Eileen Ann. (1997). *Students' use of atomic and molecular models in learning chemistry* (State University of New York at Albany). DAI-A 58(07), p. 2590, 1998. [AAT9802420]

Despite extensive exposure to atomic models in lectures, in the textbook, and in computer activities, students did not apply models appropriately, but rather used a simple Bohr model which had not been used in the course. Results suggest that more attention be given to models' selection, use, integration, and limitations.

che, rem (PS)

O'Connor, Teresa M. (1997). *Creating effective environmental education: A case study utilizing an integrative teaching methodology to develop positive environmental attitudes and behaviors in the secondary general science curriculum* (Temple University). DAI-A 58(03), p. 0806, 1997. [AAT9724264]

This study presents an in-depth case study of the development, the actual implementation, and subsequent evaluation of an environmental curriculum, and gives an in-depth view of life in this class of sixty-one sessions over a fourteen week period in a ninth grade general science class of twenty-four students.

ene, cur, ped, ats (HS)

Ojala, Jorma. (1997). *Textual and visual representations of planetary phenomena in textbooks for comprehensive and senior secondary school use* (Jyvaskylan Yliopisto). DAI-C 59(04), p. 0823, 1998. [Not Available from UMI]

Senior secondary-level earth and space science textbooks contained errors and did not explain everyday concepts or promote conceptual change.

mat, esg (SE)

Oluka, Silas Omoding. (1997). *Towards ecoscience: Environmental and sociocultural perspectives in science. Some insights from Uganda, and implications for higher education* (University of Alberta). DAI-A 58(09), p. 3465, 1998. [AATNQ21616]

To illuminate science and technology at the university and school system level, this study recommends a framework of science and science education which could foster closer alliances with indigenous knowledge, the needs of the majorities, including women, and sensitivity to ecological balance.

nas, eth, phe, cur, ref (ALL)

Omami, Catherine Najet. (1997). *Optimum time to use instructional videos in the science classroom* (Texas Woman's University). MAI 36(03), p. 0675, 1998. [AAT1388062]

This study was conducted to determine the most effective point in a teaching sequence for videos to be shown in order to have the greatest positive impact on student learning in a fourth grade science classroom. There was no significant difference in learning between the group being shown the video at the beginning of the topic and the group shown the video at the end of the topic.

Stromdahl, Helge Ronnie. (1997). *On mole and amount of substance: A study of the dynamics of concept formation and concept attainment* (Goteborgs Universitet). DAI-C 59(03), p. 0484, 1998. [Not Available from UMI]

Teachers' lack of understanding of the mole concept is used to argue that concepts are theory-laden and can only be attained within the theories to which they belong.

phe, lth, ccg, che (GEN)

Surbrook, Nancy Anne. (1997). *Children's exposure to the natural environment and their environmental attitudes: An exploratory study* (Michigan State University). MAI 36(01), p. 0021, 1998. [AAT1386904]

This study examined the relationship of children's exposure to the natural environment and their environmental attitudes at ages 4, 7, and 10. The results indicated that environmental attitudes vary at different age levels.

ene, ats, fsd (EL)

Sutherland, Erin Combs. (1997). *A study of applying conceptual change research to the secondary physics classroom in the area of mechanics* (Peabody College for Teachers of Vanderbilt University). DAI-A 58(12), p. 4606, 1998. [AAT9817288]

Overall, students (n=37) being taught using conceptual change instructional strategies showed progress in their test performance, although there was no statistically significant difference over the students (n=38) receiving traditional instruction. Speculations and recommendations about the use of conceptual change teaching techniques with secondary physics students are given.

ped, phy, ccg (SE)

Swan, Ralph E. (1997). *A potential impact of computer technology on students' alternative conceptions and explanatory style* (University of Pennsylvania). DAI-A 58(07), p. 2591, 1998. [AAT9800931]

The effective utilization of the software "Sir Isaac Newton's Games" improved fifth- and sixth-grade students' conceptualization of friction and gravity

and prevented drops toward a less optimistic explanatory style as measured by Crandall's Intellectual Achievement Scale. Qualitative analysis suggested that some students may change conceptions greatly in a relatively short period of time.

alf, cbi, ccg, ach, phy (MS)

Sweeney, Aldrin Edward. (1997). *Minority students in the science classroom: Issues of language, class, race, culture and pedagogy* (The Florida State University). DAI-A 58(03), p. 0806, 1997 [AAT9725018]

This study explored the beliefs, pedagogical practices and problems of science teachers as they related to minority students, especially those minority students for whom English is not a first language and who have limited English proficiency. Culturally derived usages of non-standard forms of English are subsumed within this definition of minority students.

mce, cid, eth, ped, bkg (TE, K-12)

Talluto, Mark Anthony. (1997). *Computer-based marine biology simulation* (California State University, Dominguez Hills). MAI 35(04), p. 0940, 1997. [AAT1384195]

This research explored the use of computer aided instruction and the validity of a marine biology simulation for elementary school children (n=30). The analysis of pretest and posttest scores revealed that the students benefited from the computer-aided instruction. The affective evaluation determined that 86.7% of the students felt they knew more about marine biology after using "Under the Sea."

bio, cbi, ach, ats (EL)

Tejkl, Pamela M. (1997). *Forensic unit: Application of science and math in the junior year* (Michigan State University). MAI 36(01), p.0033, 1998. [AAT1386908]

Two units based on forensic science were created and tested. The thematic approach used included chemistry, biology, math, and technology topics.

cur, int, tec, che, bio (HS)

Thomas, Peter Lynn. (1997). *Student conceptions of equilibrium and fundamental thermodynamic*

concepts in college physical chemistry (University of Northern Colorado). DAI-A 58(04), p. 1239, 1997. [AAT9729078]

Interviews with 16 students from three different institutions revealed twenty-nine different prevalent alternative conceptions and non-conceptions concerning equilibrium and fundamental thermodynamic concepts, including beliefs that endothermic reactions cannot be spontaneous, no heat can occur under isothermal conditions, and the entropy of the system must increase for a spontaneous change.

alf, che (PS)

Thurmond, Carolyn Koeval. (1997). *Perceptions of scientific literacy among university science professors and science education professors* (University of Miami). DAI-A 58(08), p. 3073, 1998. [AAT9805938]

Results indicate that science professors (n=16) emphasized science content when defining scientific literacy and preferred lectures, whereas science education professors (n=15) emphasized inquiry and student participation. Collaboration between science and education departments through seminars, workshops, co-teaching, and co-planning of courses is recommended.

bft, lit, ref, ntw (TE)

Tingley, Paula B. (1997). *Attitude and achievement patterns of seventh grade science students: Are there sex differences?* (University of Maine). DAI-A 58(08), p. 3074, 1998. [AAT9805031]

Results indicated no sex differences in science achievement at the sixth or seventh grade level. However, attitude was a stronger predictor of achievement for males than females. Males and females who were equal in science achievement may have different attributions for their successes and failures and these differences may have implication for future motivation to study science.

ach, ats, gen, car (MS)

Tonniss, Dorothy Ann. (1997). *Integration of classroom science performance assessment tasks by participants of the Wisconsin Performance Assessment Development Project* (The University of Wisconsin - Madison). DAI-A 59(01), p. 0076, 1998. [AAT9735856]

Science teachers demonstrated transformational thinking in their attitudes and beliefs about teaching and learning science and generally used well defined criteria to judge student work. Assessment and instructional practices were viewed as interdependent. Transformational teachers provided students with real-world assessment tasks as learning events.

asm, bft, ped, tpd (TE)

Tonso, Karen L. (1997). *Constructing engineers through practice: Gendered features of learning and identity development* (University of Colorado at Boulder). DAI-A 58(07), p. 2591, 1998. [AAT9800565]

High-status student engineers were the least likely to perform 'actual' engineering in design teams. Engineering education advanced an ideology that encouraged its practitioners to consider men's privilege and women's invisibility normal. Some teams of students at all levels carved out small oases where 'actual' engineering prevailed and women's participation was robust.

gen, tec (PS)

Troper, Jonathan Daniel. (1997). *The effects of small-group discussion on students' learning and transfer of ideas in science* (University of California, Los Angeles). DAI-A 58(12), p. 4558, 1998. [AAT9818146]

The largest influence on eighth grade students' (n=119) pre-post change was "constructive change power," defined as the product of the strength of constructive activity multiplied by the difference between the mental models used on the pretest and during group discussion. Higher level constructive activity occurred when mental models used by other students were more sophisticated.

cns, cid, cpl, lrg (MS)

Tucker, Linda Bart. (1997). *Science at Hampton Normal and Agricultural Institute, 1868-1893* (The Johns Hopkins University). DAI-A 58(04), p. 1224, 1997. [AAT9730802]

This historical study details the pragmatic, business purposes of Hampton's industries over any ideological agenda. Problems with providing specialized facilities, apparatus, and teachers made it

difficult to provide rigorous, graded science instruction. The curriculum was designed for teacher training, using broad, elementary science topics for general knowledge and to train habits of mind.

his (GEN)

Varrella, Gary Frank. (1997). *The relationship of science teachers' beliefs and practices* (The University of Iowa). DAI-A 58(08), p. 2992, 1998. [AAT9805730]

Statistically significant factors contributing to teachers' practices included: the value placed on students as individuals whose ideas and contributions to the class are important; commitment to work as partners with students in the learning environment; commitment to making instruction relevant; commitment to life-long learning; and years of participation in state and national reform movements.

bft, ped, ref (TE)

Vasquez, David Alan. (1997). *The effects of computer-game elements in physics instruction software for middle schools: A study of cognitive and affective gains* (University of San Francisco). DAI-A 58(08), p. 3099, 1998. [AAT9806266]

This study utilized a selected set of game elements to contextualize and embellish physics word problems with the aim of making such problems more engaging. The primary conclusion drawn was that the ratio of 'story' to physics-learning content (3 minutes/45 minutes) was too small to make an educational difference and should be experimentally increased.

cbi, lrg, ats, phy (MS)

Veal, William Richard. (1997). *The evolution of pedagogical content knowledge in chemistry and physics prospective secondary teachers* (University of Georgia). DAI-A 58(08), p. 3074, 1998. [AAT9807136]

Knowledge of content and students formed a base from which prospective teachers developed domain-specific pedagogical content knowledge. Development of topic-specific pedagogical content knowledge occurred before domain-specific pedagogical content knowledge. Prospective teachers believed that classroom experience was integral to pedagogical content knowledge.

ped, tpd, knt, che, phy (HS)

Volz, Nikki Lyn. (1997). *Shortchanging girls in science* (Eastern Michigan University). MAI 36(01), p. 0033, 1998. [AAT1387045]

The Attitude Toward Science in School Assessment (ATSSA) was used to evaluate the relationship between such attitude and achievement in science. Overall, the gender differences were not significant.

gen, ats, ach (ALL)

Waker, Robert Lee. (1997). *Scientific notation* (California State University, Dominguez Hills). MAI 36(02), p. 0325, 1998. [AAT1387247]

The computer program "Scientific Notation" was developed to provide tutoring, drill and practice and assessment of students new to scientific notation. Results were statistically significant (n=27 students).

cbi, sks (SE)

Wallace, Stephen R. (1997). *Structural equation model of the relationships among inquiry-based instruction, attitudes toward science, achievement in science, and gender* (Northern Illinois University). DAI-A 58(08), p. 3074, 1998. [AAT9805201]

Results of this study indicate inquiry-based instruction was effective in positively influencing 7th- and 8th- grade students' understandings of science concepts. Additionally, inquiry-based instruction did not have an adverse influence on science achievement in 9th grade.

inq, ach, ats, gen (SE)

Walters, Nancy Bannister. (1997). *Retaining aspiring scholars* (University of Minnesota). DAI-A 58(07), p. 2566, 1998. [AAT9738494]

Tinto's retention model provided the theoretical framework for this research study of the academic and social integration of academically talented students of color into the graduate and professional science degree pipeline. Study findings indicated that supportive and empowering faculty contact was considered most important by students of color who continued on to graduate and professional programs.

eth, car, ntw (PS)

Walters, Wayne Robert. (1997). *The relationship between teacher training and use of constructivist*

methodologies (University of California, Davis). DAI-A 59(06), p. 1917, 1998. [AAT9838568]

No difference in the amount of constructivist teaching methods being used in the classroom was found between teachers who had received extensive training and teachers who received little or no training in constructivist theory and methods. The school district's curricular and assessment expectations were found to be important in determining instructional methods.

cns, ped, tpd, cur, asm (TE)

Wang, Mei. (1997). *Profile of laboratory instruction in secondary school level chemistry and indication for reform* (Temple University). DAI-A 58(06), p. 2144, 1997. [AAT9738010]

This study profiled the laboratory component of instruction in secondary school level chemistry. The Modified Revised Science Teachers Behaviors Inventory (MR-STBI) was used for analysis.

lab, che, cht, ref (SE)

Ward, Randall Joe. (1997). *An investigative look at the experiences of students using the computer in science classrooms: A guide for development* (Purdue University). DAI-A 58(12), p. 4626, 1998. [AAT9819058]

The study found that regardless of the intent of a computer program, individual students used the program in various ways in response to their educational needs.

cbi (SE)

Werner, Lynn. (1997). *Effects of learning structure and summarization during computer-based instruction* (Arizona State University). DAI-A 58(10), p. 3837, 1998. [AAT9812493]

This study investigated the effects of learning strategy and summarization within a computer-based chemistry and physics program. The effects of learning strategy and summarization on posttest and enroute performance, attitude, time-on-task, and interaction behaviors were examined. Results of this study have implications for the design of computer-based instruction and the use of this medium with cooperative learning strategies.

cbi, lrg, cpl, ats, che, phy (PS)

White, Michael R. (1997). *Exploring the impact of an industrial volunteer/school science partnership on elementary teaching strategies and attitudes about future science study: A case study* (Temple University). DAI-A 58(06), p. 2145, 1997. [AAT9738014]

This study explored the impact of industrial volunteer/school partnerships on elementary science teaching behaviors and students' attitudes about future science study. Elementary teachers' behaviors during science instruction were not influenced by the partnerships.

ntw, att, ats, hos, lab (EL)

Wilder, Melinda Scholl. (1997). *Teachers' beliefs about scientific literacy and their implementation through curriculum change* (The Ohio State University). DAI-A 58(01), p. 0126, 1997. [AAT9721175]

The two teachers studied had different beliefs about scientific literacy. Findings indicated that teacher involvement was important and teacher beliefs were critical to the successful implementation of curriculum reforms that meet state and national scientific literacy goals.

bft, lit, ref, cur (TE, HS)

Wilhelms-Hackman, Desiree Anne. (1997). *A contemporary curriculum development model: A case study of the development and implementation of Alberta's senior high science programs* (University of Alberta). MAI 36(01), p. 0021, 1998. [AATMQ21238]

This study illustrates the dynamics of large-scale, curriculum reform and provides guidance to jurisdictions facing change towards an STS perspective. The model portrays the interrelationships among programs of studies, resources, professional development and the consultation and communication process.

cur, sts, ref, ntw (HS)

Williams, Erin Beth. (1997). *A comparison of personality characteristics of male and female engineering students* (Indiana State University). DAI-A 58(04), p. 1201, 1997. [AAT9729012]

Differences between personality characteristics of female (n=72) and male (n=86) freshman engineering students were studied to ascertain whether personality characteristics of these students were different from those of general collegiate students of the same sex. Engineering students of both sexes were more similar than different in personality characteristics. There were greater personality differences between freshmen male engineering students and male college students than there were between freshmen female engineering students and female college students.

gen, chs, tec, car (PS)

Williams, Tammy Kay. (1997). *Effects of an intensive middle school science experience on the attitude toward science, self-esteem, career goal orientation, and science achievement of eighth grade female students* (The University of North Carolina at Greensboro). DAI-A 58(04), p. 1239. 1997. [AAT9730030]

This study investigated the effects of a year long intensive extracurricular middle school science experience program including activities such as camping, rock climbing, specimen collecting and hiking on self-esteem, career goal orientation, and attitude toward science of eighth grade female students. Quantitative and qualitative methods were used.

nfd, ats, gen, car, bfs (MS)

Wiltshire, Michael A. (1997). *Integrating mathematics and science for below average ninth grade students* (Columbia University Teachers College). DAI-A 58(05), p. 0001. 1997. [AAT9734098]

The purposes of this study were to develop an integrated mathematics and science course for below average ninth grade students and investigate the effect of this course on students' performance. Results suggested that the most effective approach to teaching mathematics and science for below average students may be an integrated curriculum and an 'experimental methodology.'

int, chs, lrg, cpl, inq (HS)

Windward, Rolfe. (1997). *Curriculum as natural history: A life-history case study of an alternative*

science learning program (University of California, Los Angeles). DAI-A 58(06), p. 0001. 1997. [AAT9737348]

The aim of this study was to further understanding of the nexus between individual development and conceptions of science curriculum, with particular emphasis upon root metaphors. Participants of this life-history case study consisted of three female high school students, three male high school students, and their teacher.

cur, bfs, bft (HS)

Wiseman, D. Kim. (1997). *Identification of multiple intelligences for high school students in theoretical and applied science courses* (The University of Nebraska - Lincoln). DAI-A 58(04), p. 0001. 1997. [AAT9730283]

This study assessed the multiple intelligences of high school students enrolled in theoretical and applied science courses. Analysis of multiple intelligence profiles collected from this study found significant differences in logical/mathematical, bodily/kinesthetic and intrapersonal multiple intelligences of students in theoretical science courses compared to students in applied science courses.

lsy, lth, ats (HS)

Wizinowich, Janice Ingrid. (1997). *Figures of speech, signs of knowing: Towards a semiotic view of science conceptualization* (The University of Arizona). DAI-A 58(04), p. 0001. 1997. [AAT9729473]

This study investigated alternative avenues, such as the use of narrative, for science conceptualization.

ped, lrg (MS)

Wood, Barbara Bonsall. (1997). *An evaluation of a professional development course for secondary school science teachers: Chesapeake watershed ecology* (George Mason University). DAI-A 58(01), p. 0001. 1997. [AAT9719977]

This study evaluated a professional development course titled Chesapeake Watershed Ecology. The course was evaluated within the framework of Stake's Countenance Model, using an objectives-based approach liberally embedded with qualitative methods.

tpd, asm (TE)

Wu, Homer Chung-Hung. (1997). *Evaluation of interpretation: Effectiveness of the interpretive exhibit centers in Taroko National Park, Taiwan* (Stephen F. Austin State University). DAI-A 58(04), p. 0001, 1997. [AAT9729687]

Three interpretive exhibit centers at Taroko National Park (TNP) in Taiwan were evaluated.

nfd, asm (GEN)

Yamamoto, Karen Kina. (1997). *Against all odds: Tales of survival and growth of the Foundational Approaches in Science Teaching project* (Stanford University). DAI-A 57(12), p. 0001, 1997. [AAT9714204]

The study focused on the Foundational Approaches in Science Teaching (FAST) project, a long-term survivor of reform in science education. Data collection included document analysis, interviews, and observations.

his, ref, mat (GEN)

Yang, Faxian. (1997). *Integrating technology education concepts into China's educational system* (West Virginia University). DAI-A 58(02), p. 0001, 1997. [AAT9722187]

The purpose of the study was to develop a strategy for integrating technology education concepts into the Chinese mathematics and science curricula. The researcher identified the advantages, disadvantages, and major concepts of current technology education programs of selected countries. Concepts were identified that would be readily acceptable into the current Chinese educational system.

tec, int, cur, ref (GEN)

Yonts, Jane Allen. (1997). *Perceptions of structured inquiry labs by sixth-grade students, their teacher, and the researcher* (Georgia State University). DAI-A 58(08), p. 0001, 1998. [AAT9804402]

This qualitative study identified some key factors related to the roles of student participation and teacher facilitation in structured inquiry lab activities. Students, teachers, and researchers had a positive feeling about the use of structured inquiry lab activities.

inq, lab, ats, att (MS)

Young, Jerry Wayne. (1997). *The effect of four instructional methods, gender, and time of testing on the achievement of sixth graders learning to interpret graphs* (The University of Alabama). DAI-A 57(12), p. 0001, 1997. [AAT9714291]

The effects of four instructional methods (direct instruction, computer-aided instruction, video observation, and microcomputer-based lab activities) on sixth grade achievement was studied. Findings indicated that the direct instruction group and the microcomputer-based laboratory group displayed longer retention rates. Effects were not gender related.

ped, cbi, edt, ach, gen (EL, MS)

Yutakom, Naruemon. (1997). *The congruence of perceptions and behaviors exhibited by twelve successful middle school teachers in implementing Science/Technology/Society/Constructivist practices in Iowa Scope, Sequence, and Coordination schools* (The University of Iowa). DAI-A 58(05), p. 0001, 1997. [AAT9731896]

This study investigated middle school teachers' perceptions about teaching and their purported strategies for implementing Science/Technology/Society and Constructivist practices in Iowa Scope, Sequence, and Coordination (SS&C) schools, and the congruence between these teacher's perceptions and their actual behaviors. Multiple data collection methods were used.

sts, cns, bft, ped (MS)

Dissertations by Institution

This list consists of 128 institutions that produced research dissertations and theses in the area of science education for the year 1997.

Research Articles Published in 1997

Matthew J. Maurer, *The Ohio State University*
Samantha J. Romanello, *The Ohio State University*

This section lists 212 articles in science education research that were published in 1997. Each entry is coded (see Key to Codes) with one to three major codes (in bold type) and up to three minor codes, as well as the appropriate educational level in parentheses following each citation. As with many science-related areas of study, science education is becoming an interdisciplinary field. Many of the articles listed here are examples of research in science education, but appear in publications outside the traditional science education literature. Wherever possible, we have coded these articles to reflect their specific contributions to science educational research methods, techniques, and applications. A brief scan through the list of searched journals will demonstrate the increasing diversity of this literature. All entries are indexed by major codes at the end of the volume, and the list of searched journals (containing the number of articles from each) is included at the end of this chapter (see page 77).

Abd-El-Khalick, Fouad; BouJaoude, Saouma. (1997). **An exploratory study of the knowledge base for science teaching.** *Journal of Research in Science Teaching*, 34(7), 673-699.

Describes the knowledge base of a group of science teachers as related to the structure, function, and development of their disciplines and their understanding of the nature of science. Twenty teachers participated in this study and their knowledge base was found to be lacking in all respects.

knt, nas, alf, tpd (TE)

Adams, Paul E.; Krockover, Gerald H. (1997). **Concerns and perceptions of beginning secondary science and mathematics teachers.** *Science Education*, 81(1), 29-50.

Identifies concerns of beginning science and mathematics teachers about being a new teacher and their perceptions of the effectiveness of their preservice program in relation to their concerns.

att, bft, tpd, cht, knt (TE, SE)

Adams, Paul E.; Krockover, Gerald H. (1997). **Beginning science teacher cognition and its origins in the preservice secondary science teacher program.** *Journal of Research in Science Teaching*, 34(6), 633-653.

Identifies the major tenets of a preservice secondary education program, knowledge structures that beginning science teachers have constructed about the teaching and learning of science, and the correlation between them.

tpd, knt, bft, ped, lth (TE, SE)

Adedayo, Adebisi; Olawepo, J. A. (1997).

Integration of environmental education in social science curricula at the secondary school level in Nigeria: Problems and prospects. *Environmental Education Research*, 3(1), 83-93.

Examines the existing elements in and the various approaches to the integrated curriculum development project in Nigeria. Analyzes the constraints and support systems which are likely to be helpful in environmental education at the secondary level. Suggests measures and guidelines that could enhance the process of curriculum integration.

int, ene, cur, sts (SE)

Albaugh, Patti R.; et al. (1997). **Using a CD-ROM encyclopedia: Interaction of teachers, middle school students, library media specialists, and the technology.** *Research in Middle Level Education Quarterly*, 20(3), 43-55.

Observed sixth grade students and their ways of gathering information for a science report from *Encarta 94*, a CD-ROM encyclopedia.

edt, sks, ats (MS)

Aldridge, Bill G.; et al. (1997). **Scope, sequence and coordination: Tracking the success of an innovative reform project.** *Science Teacher*, 64(1), 21-25.

Discusses the ninth-grade trial implementation of the Scope, Sequence, and Coordination (SS&C) project and compares this class with the non-SS&C class

that preceded it. Reports that the project helped teachers create a more inquiry-oriented learning environment and helped students' performance.

ref, cur, inq, tpd, ach (SE)

Allen, Sue. (1997). **Using scientific inquiry activities in exhibit explanations.** *Science Education*, 81(6), 715-734.

Investigates the effect of several different scientific inquiry activities on visitors' understanding of the science underlying an interactive exhibit. Findings indicate that the interpretation activity was the most effective in facilitating visitors' understanding and the prediction activity was the least effective.

inq, lrg, nfd (GEN)

Alsop, Steve; Watts, Mike. (1997). **Sources from a Somerset village: A model for informal learning about radiation and radioactivity.** *Science Education*, 81(6), 633-650.

Research on conceptual change emphasizes the importance of factors in the cognitive domain. This research argues that models of conceptual change learning should also encompass issues of affect, cognition, and self-esteem. The use of these expressions is explained via four case studies on members of a rural village informally learning about radiation and radioactivity.

nfd, ccg, lth, bfs (AD)

Alters, Brian J. (1997). **Whose nature of science?** *Journal of Research in Science Teaching*, 34(1), 39-55.

Investigates whether basic tenets for the "nature of science" are also held by philosophers of science and explores possible related philosophical positions underpinning differences in responses. Reports that the philosophers expressed significant disagreements with the tenets and different philosophers varied on their views about the tenets.

Elam, Carol L.; et al. (1997). **Academic medicine concerns of basic science and clinical departments: Using the nominal group technique in preparation for strategic planning.** *Higher Education Management*, 9(1), 105-116.

A study investigated whether one medical school's basic science and clinical departments attached differential importance to academic missions of teaching, research, and clinical service.

cur, res, ped, att (PS)

Erinosho, Stella Y. (1997). **Scientific experiences as predictors of choice of science among female high school students in Nigeria.** *Research in Science and Technological Education*, 15(1), 85-90.

Ascertains the interplay between scientific experiences and participation in school science among girls in the first year of secondary school. Results indicate that girls in science tend to participate in activities which relate to biology and are academic.

gen, ats, bkg, bio (SE)

Erinosho, Stella Y. (1997). **The making of Nigerian women scientists and technologists.** *Journal of Career Development*, 24(1), 71-80.

Responses from 209 of 520 Nigerian women in science and technology professions and university departments found they typically attended single sex schools, had highly educated parents, had more fathers than mothers in scientific technical professions, received parental and spousal support, and were concerned about combining marriage and career.

gen, car, bkg (GEN)

Falk, John H. (1997). **Testing a museum exhibition design assumption: Effect of explicit labeling of exhibit clusters on visitor concept development.** *Science Education*, 81(6), 679-687.

Investigates a museum exhibition design assumption that visitors develop conceptual understanding of a science topic after utilizing a cluster of conceptually related exhibits which lack explicit concept labeling.

lrg, nfd (PS)

Finson, Kevin D.; Ormsbee, Christine K.; Jensen, Mary; Powers, Donald T. (1997). **Science in the mainstream: Retooling science activities.** *Journal of Science Teacher Education*, 8(3), 219-232.

Describes a project which teamed science teachers with special education teachers to retool science curricular materials for classrooms where inclusion is practiced. Teacher participants began to shift from non-user and self-concerns to student-benefit concerns, and they reported success in using the retooled activities in classrooms.

chs, cur, cpl, tpd (TE)

Fisher, Darrell; et al. (1997). **Laboratory environments and student outcomes in senior high school biology.** *American Biology Teacher*, 59(1), 214-219.

Describes an investigation of the associations between students' perceptions of laboratory environment and their attitudinal, cognitive, and practical performance outcomes. Assesses student outcomes in three distinct areas: (1) student attitudes;

(2) achievement on a written examination; and (3) practical performance, specifically in the biology classroom.

lab, bfs, ach, ats, sks (HS)

Fisher, Darrell L.; Waldrup, Bruce G. (1997). **Assessing culturally sensitive factors in the learning environment of science classrooms.** *Research in Science Education*, 27(1), 41-49.

Describes the development and validation of the Cultural Learning Environment Questionnaire (CLEQ) which assesses eight scales of the culturally sensitive environments of secondary school students.

mce, bkg, asm (SE)

Fisher, Martin S. (1997). **The effect of humor on learning in a planetarium.** *Science Education*, 81(6), 703-713.

The effect of humor on retention of information was examined at the planetarium at Ohio's Center of Science and Industry (COSI) in Columbus, OH. Results showed that the visitors who saw a humorous show retained less of the instructional material and scored lower on the test than the visitors who saw a nonhumorous show.

nfd, lrg, ped (GEN)

Flannery, Maura C. (1997). **Models in biology.** *American Biology Teacher*, 59(1), 244-248.

Addresses the most popular models currently being chosen for biological research and the reasons behind those choices. Concludes with a brief examination of the ethical issues involved, and why some animals may need to be replaced in research with model systems.

rem, res, bio, phe, sts (SE, PS)

Flannery, Maura C. (1997). **Back to bacteria.** *American Biology Teacher*, 59(6), 370-373.

Explores new research about bacteria. Discusses bacterial genomes, archaea, unusual environments, evolution, pathogens, bacterial movement, biofilms, bacteria in the body, and a bacterial obsession.

res, bio (PS, SE)

Fleer, Marilyn. (1997). **A cross-cultural study of rural Australian Aboriginal children's understandings of night and day.** *Research in Science Education*, 27(1), 101-116.

Reports on a pilot study which sought to find out what four-to-eight year old rural Australian Aboriginal children think about night and day. Findings indicate more variations in thinking than were found in earlier research.

eth, alf, kns (EL)

Fouad, Nadya A.; Smith, Philip L.; Enochs, Larry. (1997). **Reliability and validity evidence for the middle school self-efficacy scale.** *Measurement and Evaluation in Counseling and Development*, 30(1), 17-31.

Provides validity evidence for a new instrument that assesses a career related self-efficacy intervention for Hispanic and Latino students. Focuses on the broad area of career decision making and on math and science tasks. Results indicate adequate validity of the instrument, particularly for women and minority students.

asm, car, eth, ats (MS)

Fouzder, Nani B. (1997). **The effect of modified input on the acquisition of vocabulary in science by a newly arrived bilingual student in a secondary school.** *Multicultural Teaching*, 15(3), 23-24.

Studies the effect of specific teacher input, modified for comprehension, on the acquisition of science vocabulary by a recent immigrant, a 12 year-old newly arrived at an English secondary school. Comprehensible input played an important part in the acquisition of this student's science vocabulary.

mce, cid, ped (MS)

Freedman, Michael P. (1997). **Relationship among laboratory instruction, attitude toward science, and achievement in science knowledge.** *Journal of Research in Science Teaching*, 34(4), 343-357.

Investigates the use of a hands-on laboratory program for improving student attitudes toward science and increasing student achievement levels in science knowledge. Findings indicated that students who had laboratory instruction scored higher in achievement

and showed a positive correlation between attitude and achievement. No significant differences were obtained for the limited English proficiency groups.

Ginsberg, Edward S. (1997). **Survey of physics instructor attitudes on student access to problem solutions.** *Electronic Journal of Science Education*, 2(2) [1997, December 1]. Retrieved September 9, 1998 from the World Wide Web. [<http://unr.edu/homepage/jcannon/ejse/ginsbergetal.html>]

This study presents data from a survey of the attitudes of university physics instructors on allowing students access to textbook problem solutions. A detailed analysis of all survey responses is included, as well as implications for pedagogical strategies.

att, mat, ped, phy (PS)

Gossen, Eleanor; Kaczor, Sue. (1997). **Variation in interlibrary loan use by University at Albany science departments.** *Library Resources & Technical Services*, 41(1), 17-28.

Investigates interlibrary loan use patterns for scientists at SUNY (State University of New York)

Albany by analyzing one year's worth of filled interlibrary loan requests for journal articles. Highlights include differences among scientific disciplines; year of publication; and sources of citations.

mat (GEN)

Granados, Deanne R. Perez; Callanan, Maureen A. (1997). **Parents and siblings as early resources for young children's learning in Mexican descent families.** *Hispanic Journal of Behavioral Sciences*, 19(1), 3-33.

Interviews with parents from 50 Mexican descent families revealed that parents encouraged their preschool children to ask questions about science and causal relationships; older and younger siblings learned different skills from one another; and children learned through observation and imitation.

eth, bkg, sks, lrg (EC)

Greenfield, Teresa Arambula. (1997). **Gender- and grade-level differences in science interest and participation.** *Science Education*, 81(3), 259-275.

Explores students' attitudes towards science, prior science-related experiences, and perceptions of science and scientists and how they vary by gender and grade. Findings indicate that girls and boys expressed similar opinions on all survey scales but girls were less likely to view science as a male-stereotyped field.

gen, nas, ats, bkg, bfs, car (K-12)

Griffin, Janette; Symington, David. (1997). **Moving from task-orientated to learning-orientated strategies on school excursions to museums.** *Science Education*, 81(6), 763-779.

Although museums are considered optimal venues for informal learning, this study concludes that most school classes visiting museums are restricted and structured, teachers use mainly task-orientated teaching practices, and the museum activities are rarely linked to topics being studied at school.

nfd, lrg, ped (K-12)

Guruswamy, Chitra; et al. (1997). **Students' understanding of the transfer of charge between conductors.** *Physics Education*, 32(2), 91-96.

Investigates students' understanding of the transfer of charge between two charged conductors. Findings indicate that a considerable number of students from eighth grade to college in advanced physics courses were unable to predict the transfer of charge correctly from one conductor to another.

phy, kns, alf (SE, PS)

Guzzetti, Barbara J.; et al. (1997). **Influence of text structure on learning counterintuitive physics concepts.** *Journal of Research in Science Teaching*, 34(7), 701-719.

Explores the influences of text structure on students' conceptual change. Case studies were conducted and results showed that individuals used refutational text to change their alternative conceptions and acquire new concepts. Findings indicate that refutational text does cause cognitive conflict.

ccg, mat, phy (PS)

Haidar, Abdullateef. (1997). **Prospective chemistry teachers' conceptions of the conservation of matter and related concepts.** *Journal of Research in Science Teaching*, 34(2), 181-197.

Reports a study of the quality and extent of understanding of certain well-known theoretical concepts which are held by prospective teachers (n=173) of chemistry in Yemen. Results indicate that teacher understanding ranges from a partial understanding with a specific misconception to no understanding.

alf, knt, che, tpd (TE)

Haiqi, Zhang. (1997). **More authors, more institutions, and more funding sources: Hot papers in biology from 1991 to 1993.** *Journal of the American Society for Information Science*, 48(7), 662-669.

A bibliometric study analyzed the authorship of biology periodicals, "Nature," "Science," and "Cell" from 1991 to 1993. The source data consisted of "hot papers" in biology and a sample of articles from the three periodicals. Results showed that the hot papers have more authors and participating institutions, and that funding sources are related to the number of authors.

mat, bio, res (GEN)

Hall, Sue. (1997). **The problem with differentiation.** *School Science Review*, 78(284), 95-98.

Describes an attempt to introduce differentiation by task in an inner city secondary school. Concludes that differentiated work cards lead to no significant improvement in the achievement of lower ability students. High- and medium-ability students improved their performance as a result of using the work cards.

sks, ach, chs, ped (SE)

Hamilton, Laura S.; et al. (1997). **Interview procedures for validating science assessments.** *Applied Measurement in Education*, 10(2), 181-200.

The usefulness of small scale interview studies to explore the validity of science achievement tests in several formats was studied with 141 high school students and 49 fifth and sixth graders. Results, which provided evidence of test validity, also support the use of small scale qualitative interviews in test validation.

res, ach (K-12)

Hand, Brian; Treagust, David F.; Vance, Keith. (1997). **Student perceptions of the social constructivist classroom.** *Science Education*, 81(5), 561-575.

Examines student perceptions of the changing nature of a classroom as a result of the implementation of constructivist approaches. Results indicate that students are appreciative of the opportunity to use their own ideas and knowledge.

cns, ats, cid, ped (PS)

Harris, Charles L.; et al. (1997). **Integrated problem-based learning for first year medical students: Does it teach biochemical principles?** *Biochemical Education*, 25(3), 146-150.

Describes an integrated problem-based learning experience for first-year medical students and assesses the effectiveness of the process in identifying basic science issues relevant to biochemical principles.

pbs, int, ped, lrg (PS)

Hartlet, James; Gregg, Michael A. (1997). **Divergent thinking in arts and science students:**

"Contrary imaginations" at Keele revisited. *Studies in Higher Education*, 22(1), 93-97.

A study replicated earlier research on divergent thinking and college major at Keele University (England), gaining weak support for the notion that arts students differ significantly from science students on measures of divergent thinking.

car, chs, lsy, kns (PS)

Harwood, William S.; McMahon, Maureen M. (1997). **Effects of integrated video media on student achievement and attitudes in high school chemistry.** *Journal of Research in Science Teaching*, 34(6), 617-631.

Explores the effects of an integrated video media curriculum enhancement on students' achievement and attitudes in a high school chemistry course. Findings reveal significantly higher achievement scores for students who experienced the course enhanced with integrated video media.

edt, ats, ach, che (HS)

Hatzinikita, Vassilia; Koulaidis, Vasilis. (1997). **Pupils' ideas on conservation during changes in the state of water.** *Research in Science and Technological Education*, 15(1), 53-70.

Explores both the qualitative and quantitative dimensions of pupils' ideas related to conservation during state changes of water. Analysis of questionnaire data indicates that qualitative understanding precedes quantitative.

kns, alf, phy (K-12)

Hayhurst, Anne-Marie; Campbell, Maddie; Howlett, Dennis. (1997). **Energy ideas in the nursery.** *Primary Science Review*, 48, 8-10.

Details the process and results of an action research project that explored children's understandings of why toys move in certain ways. The purpose of the project is to inform tutoring sessions and the classroom practices of student teachers.

kns, phy, tpd (EL, TE)

Hounshell, Paul B.; Madrazo, Gerry M., Jr. (1997). **The role expectancy of the science supervisor revisited.** *Science Educator*, 6(1), 33-35.

Reports on a study designed to assess the perceptions of principals, teachers, superintendents, science supervisors, and science education leaders (n=628) about the role of the science education expert. Findings indicate that the role of the science supervisor has emerged as a key element in the discussion of secondary science education.

Howard, Robert E.; Boone, William J. (1997). **What influences students to enjoy introductory science laboratories?** *Journal of College Science Teaching*, 26(6), 383-387.

Investigates which factors are important in revising chemistry laboratory experiments to enhance student interest and enjoyment of experimental science. Findings indicate the importance of several factors including varied content, real-world connections, items from outside the student's usual range of experience, well-paced experiments, error-free procedures, easily mastered manipulations, social factors, and a positive atmosphere.

lab, ats, ped, che (PS)

Howe, Ann C.; Stubbs, Harriett S. (1997). **Empowering science teachers: A model for professional development.** *Journal of Science Teacher Education*, 8(3), 167-182.

Presents some results of the SCI-LINK teacher professional development program. The SCI-LINK summer institutes allows teachers to work with scientists to learn about current research and develop curricula for their classrooms. Teachers involved indicated increased self-confidence, development of new teaching ideas and practices, and development of previously unsuspected leadership abilities.

ntw, tpd, cur, res (TE)

Huffman, Douglas. (1997). **Effect of explicit problem solving instruction on high school students' problem-solving performance and conceptual understanding of physics.** *Journal of Research in Science Teaching*, 34(6), 551-570.

Investigates the effect of explicit problem-solving instruction on high school students' (n=145) conceptual understanding of physics. Findings indicate that the explicit strategy improved the

quality and completeness of students' physics representations more than the textbook strategy.

pbs, ccg, phy, ped (SE)

Huinker, DeAnn; Madison, Sandra K. (1997). **Preparing efficacious elementary teachers in science and mathematics: The influence of methods courses.** *Journal of Science Teacher Education*, 8(2), 107-126.

Finds that the math and science personal teaching efficacy and outcome expectancy beliefs of preservice elementary teachers showed significant increases after participation in an integrated, hands-on methods course designed according to constructivist philosophy. Results were consistent over two semesters.

bft, tpd, hos, int, cns (TE, EL)

Hynd, Cynthia; et al. (1997). **Preservice elementary school teachers' conceptual change about projectile motion: Refutation text, demonstration, affective factors, and relevance.** *Science Education*, 81(1), 1-27.

Investigates changes in preservice teachers' conceptions about projectile motion brought about by a combination of reading and demonstration and appeal to usefulness. Results indicate the effectiveness of a combined Demo-Text condition on immediate posttests and effectiveness of text in producing long-term change.

ccg, tpd, knt, ped, mat (TE, EL)

Iding, Marie K. (1997). **Can questions facilitate learning from illustrated science texts?** *Reading Psychology*, 18(1), 1-29.

Examines the effectiveness of using questions to facilitate processing of diagrams in science texts. Finds that questions about illustrations do not facilitate learning.

mat, lrg (PS)

Ingvarson, Lawrence; Loughran, John. (1997). **Loose connections: The context of science teachers' work.** *Research in Science Education*, 27(1), 1-24.

Explores the problems that a national strategy for the professional development of science teachers

attempted to address and reports on the theme of "loose connections" that emerged. Discusses implications for a national professional development strategy.

tpd, ref (TE)

Jackson, David F. (1997). **Case studies of micro-computer and interactive video simulations in middle school earth science teaching.** *Journal of Science Education and Technology*, 6(2), 127-141.

Synthesizes the results of three case studies of middle school classrooms in which computer and video materials were used to teach topics in earth and space sciences through interactive simulations.

edt, lrg, esg (MS)

Jackson, David F.; et al. (1997). **Internet resources for middle school science: Golden opportunity or "Silicon Snake Oil?"** *Journal of Science Education and Technology*, 6(1), 49-57.

Reports on a study that examines the experiences of six teachers at three schools in learning about and beginning to implement or enhance project-based learning in their middle school science classrooms using a variety of resources available on the Internet.

edt, ped, tpd (TE,MS)

James, Robert K.; et al. (1997). **Science Research.** *Science Scope*; 20(6), 63-66.

Describes the Agricultural Research Service Science Education Collaborative (ARSC), a project aimed at making the U.S. Department of Agriculture's research labs more accessible to the educational community and encouraging students to consider careers in science. Presents a case study of a teacher in the project and discusses the impacts of the partnership.

car, ntw, tpd, res (GEN)

Jetton, Tamara L.; Alexander, Patricia A. (1997). **Instructional importance: What teachers value and what students learn.** *Reading Research Quarterly*, 32(3), 290-308.

Examines contextual factors that influence what students deem interesting and important by examining what teachers signal as interesting/important in their classroom discussions and

assessments. Reveals that the valuing system within three classrooms varied in noticeable ways.

bft, bfs, cid, bkg (HS)

Johanson, George A. (1997). **Differential item functioning in attitude assessment.** *Evaluation Practice*, 18(2), 127-135.

A discussion of differential item functioning (DIF) in the context of attitude assessment is followed by examples involving the detection of DIF on an attitudes toward science scale completed by 1,550 elementary school students and the finding of no DIF in a workshop evaluation completed by 1,682 adults.

ats, asm (AD, EL)

Johnson, Donald M.; Wardlow, George W.; Franklin, Timothy D. (1997). **Hands-on activities versus worksheets in reinforcing physical science principles: Effects on student achievement and attitude.** *Journal of Agricultural Education*, 38(3), 9-17.

A group of 132 agricultural science students were divided into an experimental group, who completed hands-on activities on Ohm's Law and incline plane, and a control group who completed worksheets. There were no significant differences in immediate or follow up measures of achievement.

hos, lrg (HS)

Johnstone, A. H.; et al. (1997). **How long is a chain? Reasoning in science.** *School Science Review*, 78(285), 73-77.

Analyzes the length of spontaneous reasoning chains exhibited by pupils in primary and early secondary schools. Findings indicate that the reasoning chain lengths may make it difficult for students to handle parts of the science curriculum that involve multi-step reasoning processes.

pbs, sks, lrg, cur (EL)

Jones, Leslie S. (1997). **Opening doors with informal science: Exposure and access for our underserved students.** *Science Education*, 81(6), 663-677.

The Young Scholars Program at The Ohio State University is a 6-year pre-collegiate intervention program designed to prepare academically talented,

economically disadvantaged minority students for college education. This study describes the success of this effort to reshape the traditional presentation of agriculture.

Kamen, Michael; et al. (1997). **A multiple perspective analysis of the role of language in inquiry science learning: To build a tower.** *Electronic Journal of Science Education*, 2(1) [1997, September]. Retrieved September 9, 1998 from the World Wide Web. [http://unr.edu/homepage/jcannon/ejse/kamen_et al.html]

This paper analyzes a short discussion between several elementary students during a science activity. The interaction between language and science learning is discussed relative to different theoretical perspectives, in addition to classroom implications.

cid, lth, ped (EL)

Kassebaum, Donald G.; et al. (1997). **The objectives of medical education: Reflections in the accreditation-looking glass.** *Academic Medicine*, 72(7), 647-656.

A study using accreditation data, institutional self studies, and accreditation site visit reports on 59 medical schools explored the extent to which the schools have established institutional and departmental educational objectives.

cur, asm (PS)

Kelly, Gregory J.; Crawford, Teresa. (1997). **An ethnographic investigation of the discourse processes of school science.** *Science Education*, 81(5), 533-559.

Draws from studies in the sociology of scientific knowledge to create a new perspective for understanding school science. Merges ethnography and discourse analysis to study science-in-the-making in a physics classroom. Investigates local conceptual ecologies.

cid, phe, nas (EL)

Kirst, Michael W.; et al. (1997). **Politics of science education standards.** *Elementary School Journal*, 97(4), 315-328.

Specifies some of the conflicts in philosophies, values, and priorities regarding scientific knowledge present in the development of science education curriculum standards through the use of the "Science for All Americans project." Excerpts interviews to identify key issues.

cur, phe, ref, nas, lit (GEN)

Klein, Stephen P.; et al. (1997). **Gender and racial/ethnic differences on performance assessments in science.** *Educational Evaluation and Policy Analysis*, 19(2), 83-97.

Whether differences in mean scores among gender and racial/ethnic groups on science performance assessments are comparable to those for traditional tests was studied with 2,000 students in grades five, six, and nine. Overall, results suggest that the type of test has little effect on these differences in scores.

eth, gen, sks, asm, ach (MS, SE)

Korpan, Connie A.; et al. (1997). **What did you learn outside of school today? Using structured interviews to document home and community activities related to science and technology.** *Science Education*, 81(6), 651-662.

Children's activities related to science, nature, and technology were studied via structured interviews of parents and students in pre-school through upper-elementary grades. Describes how interviews were developed, what type of information was obtained, and lessons learned.

nfd, sts, lrg, res (EC, EL)

Korpan, Connie A.; et al. (1997). **Assessing literacy in science: Evaluation of scientific news briefs.** *Science Education*, 81(5), 515-532.

Examines the types of requests for information made by university students (n=60) as they evaluate scientific news briefs. Student requests most often focus on how research is conducted and why results might occur.

lit, mat, res, kns (PS)

Koul, Ravinda; Dana, Thomas M. (1997). **School science in India: Curriculum developers/textbook authors' perspectives.** *Electronic Journal of Science Education*, 2(2) [1997, December 1]. Retrieved September 9, 1998 from the World Wide Web. [http://unr.edu/homepage/jcannon/ejse/kouldana.html]

This report presents data from interviews with curriculum developers/textbook authors to offer insights into the gap between objectives of the National Policy on Education and the development of more meaningful and relevant school science materials.

cur, mat, ref (K-12)

Krakauer, Janet. (1997). **Roadkill Roundup.** *Science Scope*, 20(7), 13-15.

Describes the Fifth Grade Roadkill Study that was designed to make students aware of the types of animals, chiefly mammals, that live in the central piedmont area of North Carolina. Involves students taking a survey of roadkills.

res, ped (MS)

Kumar, David. (1997). **Public school choice and science education: A survey of preservice elementary teachers.** *Contemporary Education*, 18(3), 170-173.

This study assessed 73 preservice elementary teachers' attitudes toward public school choice and science education. Survey data indicated that they moderately supported public school choice, perceived it as a means of improving student science performance and program competitiveness, and perceived parental choice favorably.

att, ref (EL, TE)

Kyburz-Graber, Regula; et al. (1997). **A socio-ecological approach to interdisciplinary environmental education in senior high schools.** *Environmental Education Research*, 3(1), 17-28.

Presents research founded on a socio-ecological approach to environmental education that includes individual and structural aspects of environmental awareness and problem solving. Presents one instrument used in discussions with teacher teams.

ene, pbs, ped, tpd (SE)

Lavoie, Derrick R. (1997). **Delivering university science content/education courses to high school science teachers via telecommunications: An evaluation.** *Electronic Journal of Science Education*, 1(4) [1997, June 1]. Retrieved September 9, 1998 from the World Wide Web. [http://unr.edu/homepage/jcannon/ejse/lavoie.html]

This study examines the effectiveness of teaching university courses to high school science teachers via a software conferencing system. The study also assessed attitudes, learning outcomes, and interactions between participants and instructors.

edt, tpd, ntw (TE)

Linn, Marcia C. (1997). **The role of the laboratory in science learning.** *Elementary School Journal*, 97(4), 401-417.

Gives historical account of research and practices associated with precollege science laboratories. Described three social contexts of research on science laboratories: separation, interaction, and partnership. Argues that more partnerships are needed to continue improvement to the science laboratory.

lab, his (K-12)

List, Julianne. (1997). **Employment opportunities for university graduates in Europe.** *Vocational Training: European Journal*, 10, 5-14.

The labor market for college graduates in Europe is better than for non-graduates. However, economists, engineers, and natural scientists fare better than humanities and social science graduates. Temporary positions are increasing among entry level workers.

car (PS)

Liu, Chin Tang; Yager, Robert E. (1997). **The Iowa Scope, Sequence, and Coordination project: A middle school science reform program approved by the National Diffusion Network.** *Research in Middle Level Education Quarterly*, 20(4), 77-105.

Examines learning in science concepts, process, application, creativity, attitude, and world view of students participating in the Iowa Scope, Sequence, and Coordination (SS&C) project, part of the national reform effort using the STS approach and constructivist teaching practices.

ref, sts, cns, lrg, ats, sks (MS)

Lord, Thomas R. (1997). **A comparison between traditional and constructivist teaching in college biology.** *Innovative Higher Education*, 21(3), 197-216.

A study compared student learning in two sections of an introductory college biology course for nonmajors. Groups were taught in the traditional teacher centered, lecture/laboratory format (n=86 students) and in a student centered constructivist format (n=98). The latter group performed significantly better on the same tests, maintained a better attitude throughout, and enjoyed the course more.

cns, ped, lrg, ats (PS)

Lord, Thomas; Holland, Melinda. (1997). **Preservice secondary education majors and visual-spatial perception: An important cognitive aptitude in the teaching of science and mathematics.** *Journal of Science Teacher Education*, 8(1), 43-53.

Finds that preservice teachers in science/mathematics, mechanics/fine arts, and allied health/physical education fields scored significantly higher on spatial ability tests than preservice teachers in history/social studies and English/humanities fields. Gender differences were not significant in the higher-scoring majors.

chs, sks, gen (TE)

Loving, Cathleen C.; Marshall, James E. (1997). **Increasing the pool of ethnically diverse science teachers: A mid-project evaluation.** *Journal of Science Teacher Education*, 8(3), 205-217.

Describes a project to recruit and retain minority students as preservice science teachers. Successes and modifications are discussed, and implications for similar efforts are given.

tpd, eth, eqt, car (TE)

Lu, Casey R.; et al. (1997). **The effect of a microcomputer-based biology study center on learning in high school biology students.** *American Biology Teacher*, 59(5), 270-278.

Describes a Computer-Assisted Instruction (CAI) package covering biology concepts for an entire school year and evaluates the effect of this CAI on learning. Findings indicate positive effects of CAI on achievement and attitude.

cbi, ach, ats, bio (HS)

Lynch, Sharon. (1997). **Novice teachers' encounter with national science education reform: Entanglements or intelligent interconnections?** *Journal of Research in Science Teaching*, 34(1), 3-17.

Reports on a project where 25 preservice and recently-inducted science teachers analyzed materials of Project 2061 and the National Science Education Standards, created an evaluation instrument, and developed and analyzed teaching units.

asm, mat, ref, tpd, cur, ped (K-12)

Marques, Luis; Thompson, David. (1997). **Portuguese students' understanding at ages 10-11 and 14-15 of the origin and nature of the earth and the development of life.** *Research in Science and Technological Education*, 15(1), 29-51.

Uses interviews and a written questionnaire to probe students' ideas on the origin of earth and life on earth. A significant number of commonly held misconceptions were prevalent in the sample (n=493).

alf, evo (EL, SE)

Mastrilli, Thomas M. (1997). **Instructional analogies used by biology teachers: Implications for practice and teacher preparation.** *Journal of Science Teacher Education*, 8(3), 187-204.

Describes an ethnographic investigation of nine science teachers' use of analogies during instruction. Found that the teachers studied did not have adequate knowledge of the functional or cognitive use of analogies in their classrooms. Implications for teacher education are discussed.

ped, cid, tpd (TE)

Mazzoni, Dale S.; et al. (1997). **Perspectives on the instruction of biological aging courses.** *Educational Gerontology*, 23(6), 549-565.

Biological aging courses should be taught to nonmajors, whose mixed backgrounds require appropriate strategies such as alteration of content order, decompartmentalization, and relating material to social sciences. Appropriate textbooks should be understandable without a science background and integrate the topic with other disciplines.

cur, ped, bio (PS)

McDonald, Robert B. (1997). **Using participation in public school "Family Science Night" programs as a component in the preparation of preservice elementary teachers.** *Science Education*, 81(5), 577-595.

Describes a series of science programs that involve university students, elementary students, and their parents in hands-on science activities. Conclusions are based on qualitative data collected from observations of the cooperative groups formed by the participants.

hos, nfd, tpd, ntw, cpl (ALL)

McFarland, Jacqueline L. (1997). **A comparison of regular students and students with learning disabilities on a performance-based assessment in the area of science.** *Learning Disabilities: A Multidisciplinary Journal*, 8(2), 109-115.

Examined the performance of middle school students with learning disabilities (n=86) or without (n=39) on the Science Appraisal Battery. Regular education students outperformed students with learning disabilities on all portions of the test and on both verbal and hands-on questions.

asm, chs, eqt, sks (MS)

McKenna, Bernard. (1997). **How engineers write: An empirical study of engineering report writing.** *Applied Linguistics*, 18(2), 189-211.

Tries an analysis of engineering reports using a modified version of Gosden's (1993) analysis of the science research article. Using Hallidayan sociolinguistic concepts, the analysis demonstrates how engineering writers linguistically convert real world entities and processes into non real world concepts.

sks, tec, res (GEN)

Medin, Douglas L.; et al. (1997). **Categorization and reasoning among tree experts: Do all roads lead to Rome?** *Cognitive Psychology*, 32(1), 49-96.

Results of two experiments concerned with categorization among different types of tree experts (4 taxonomists, 10 landscape workers, and 10 park maintenance employees in the first experiment and a subset of these experts in the second) show a pattern of similarities and differences.

car, phe, lth (GEN)

Mellado, Vicente. (1997). **Preservice teachers' classroom practice and their conceptions of the nature of science.** *Science and Education*, 6(4), 331-354.

Describes research conducted with student teachers of elementary and secondary science education. Analyzes and compares the preservice teachers' conceptions of science with their classroom practices when teaching a science lesson. Results indicate that there is no correspondence between student teacher conceptions of the nature of science and classroom practice.

nas, ped, bft, tpd (TE)

Meyer, Karen; Woodruff, Earl. (1997). **Consensually driven explanation in science teaching.** *Science Education*, 81(2), 173-192.

Focuses on one target group of seventh grade science students (n=19) who are working to achieve consensus and a coherent explanation of light and shadow effects. Articulates the beginnings of a framework for consensus building with inquiry discourse.

cid, inq (MS)

Meyling, Heinz. (1997). **How to change students' conceptions of the epistemology of science.** *Science and Education*, 6(4), 397-416.

Part One of this article presents empirical results of students' epistemological conceptions of laws, hypotheses, theories, and models. These results are discussed in relation to research results from different recent publications. Part Two gives an outline and analysis of a two-year program for teaching epistemology in a physics course.

phe, ccg, nas, ped, phy (SE)

Moore, Richard W.; Foy, Rachel Leigh Hill. (1997). **The scientific attitude inventory: A revision (SAI II).** *Journal of Research in Science Teaching*, 34(4), 327-336.

Describes the development of a revised Scientific Attitude Inventory (SAI II). Reports on a field test of the revised instrument. Concludes that the revised instrument is a significant improvement over the original.

ats, asm (K-12)

Morrow, Lesley Mandel; et al. (1997). **The effect of a literature-based program integrated into literacy and science instruction with children from diverse backgrounds.** *Reading Research Quarterly*, 32(1), 54-76.

Determines the impact of a literature-based program integrated into literacy and science instruction on achievement, use of literature, and attitudes toward the literacy and science program. Finds that literature/science group children scored better on all literacy measures than literature only group children, who scored better on all measures than control group children.

int, ach, ats (EL)

Mueller, Andrea. (1997). **Discourse of scientific inquiry in the elementary classroom.** *Journal of Elementary Science Education*, 9(1), 15-33.

Presents two studies that explore the connection between students' language use and how they participate in small group science activities. Describes the range of language used by groups of students while working with materials in several elementary science classrooms. Also examines how students use language in small groups to discuss, clarify, and build knowledge about the task at hand.

cid, cpl, lth (EL)

Naizer, Gilbert L. (1997). **Validity and reliability issues of performance portfolio assessment.** *Action in Teacher Education*, 18(4), 1-9.

This study evaluated the validity and reliability of performance portfolios in a preservice elementary mathematics/science methods class, assessing students' domain strategic and general learning strategic knowledge. Results supported performance

portfolios as a valid method of assessing desired abilities of preservice teachers that can be reliably graded.

asm, tpd (TE, EL)

Neathery, M. Faye. (1997). **Elementary and secondary students' perceptions toward science: Correlations with gender, ethnicity, ability, grade, and science achievement.** *Electronic Journal of Science Education*, 2(1) [1997, September 1]. Retrieved September 9, 1998 from the World Wide Web. [<http://unr.edu/homepage/jcannon/ejse/neathery.html>]

This study found significant relationships between ability and four student attitudes toward science. Students of high ability rated science as valuable, understandable, and easy; whereas, students of low ability rated science as important.

ats, chs, sks, gen, eth (K-12)

Nelson, Mike; Pan, Alex. (1997). **Integrating the concept attainment teaching model and videodisk images.** *Journal of Elementary Science Education*, 9(1), 34-48.

Investigates preservice elementary teachers' responses to a concept attainment task using videodisk pictures and line drawings. Findings indicate that students using videodisk pictures used inferences to construct patterns while students using line drawings in connection with pictures significantly made more observations and developed fewer ideas to make viable patterns.

edt, lrg, knt (TE, EL)

Niaz, Mansoor. (1997). **Can we integrate qualitative and quantitative research in science education?** *Science and Education*, 6(3), 291-300.

Emphasizes the importance of integrating qualitative and quantitative research methodologies in science education. Reviews literature in areas relevant to science education to show that researchers are far from advocating qualitative research as the only methodology.

res (GEN)

Nichols, Sharon E.; Tippins, Deborah; Wieseman, Katherine. (1997). **A toolkit for developing**

critically reflective science teachers. *Journal of Science Teacher Education*, 8(2), 77-106.

Reviews research and details authors' experiences using portfolios, journals, cases, learning maps, stories re-told, metaphors and proverbs to engage prospective teachers in the process of self-reflection and evaluation.

tpd, res, skt (TE)

Norby, Rena F. (1997). **Evaluating progress in gender equity in careers for women in science and technology: The impact of role modeling on women's career choices.** *Electronic Journal of Science Education*, 1(3) [1997, March 1]. Retrieved September 9, 1998 from the World Wide Web. [http://unr.edu/homepage/jcannon/ejse/norby.html]

This report summarizes the results of the responses to a survey to identify the effects of role models on the career choices of women in technology-related professions. Implications for teacher and science professionals planning instructions are discussed.

car, ntw, gen, tpd, tec, eqt (ALL)

Orion, Nir; et al. (1997). **Development and validation of an instrument for assessing the learning environment of outdoor science activities.** *Science Education*, 81(2), 161-171.

Describes the development of the Science Outdoor Learning Environment Inventory which includes seven scales. The instrument was used by high school students (n=643) and the results indicate that the instrument is a sensitive measure that differentiates between various types of field trips.

fsd, asm (HS)

Pace, Paul. (1997). **Environmental education in Malta: Trends and challenges.** *Environmental Education Research*, 3(1), 69-82.

Analyzes the main events that characterize the development of environmental education in Malta. Focuses on three major evolutionary stages of that development: (1) the awareness stage; (2) the fragmentary stage; and (3) the coordinated stage.

ene, cur, his (K-12)

Palmer, David H.; Flanagan, Ross B. (1997). **Readiness to change the conception that "motion-**

implies-force:" A comparison of 12-year-old and 16-year-old students. *Science Education*, 81(3), 317-331.

Explores whether older students were less ready to change their alternative conceptions than younger students. Findings indicate that after reading a refutational text, conceptual change occurred in 35% of year six students and 44% of year 10 students. Concludes that there was no evidence to suggest that conceptual change is more difficult for older students.

alf, ccg, phy (SE)

Palmquist, Bruce C.; Finley, Fred N. (1997). **Preservice teachers' views of the nature of science during a postbaccalaureate science teaching program.** *Journal of Research in Science Teaching*, 34(6), 595-615.

Investigates preservice science teachers' views of the nature of science and describes changes in those views during a teacher education program.

bft, nas, ccg, tpd (TE)

Park, Jongwon; Pak, Sungjae. (1997). **Students' responses to experimental evidence based on perceptions of causality and availability of evidence.** *Journal of Research in Science Teaching*, 34(1), 57-67.

Investigates students' causal beliefs about the relationship between variables in an electric experiment and the degree to which their tendency to make either idea-based or evidence-based statements depends on a prior belief about the causal efficacy of that variable.

kns, phy (MS)

Parker, Joan. (1997). **Developing enthusiastic primary science teachers.** *Education in Science*, (173), 18-19.

Presents a student's eye view of science education. The views emerged from a three-year research and evaluation study carried out at the Manchester Metropolitan University in England that involved preservice primary teachers.

tpd, att (TE, EL)

Parkinson, Jean; Adendorff, Ralph. (1997). **Two streams of literacy in science: A look at first-year laboratory manuals.** *Language and Education*, 11(3), 200-221.

Reports on an ethnographic study of laboratory sessions in the departments of Physics and Chemistry at the University of Natal in Durban, South Africa, with specific focus on the comparison of the function of verbs in three first-year laboratory manuals.

lab, mat, lit (PS)

Parsons, Eileen Carlton. (1997). **Black high school females' images of the scientist: Expression of culture.** *Journal of Research in Science Teaching*, 34(7), 745-768.

Investigates black high school females' images of scientists. Descriptions of the scientist differed with the ethnicity ascribed to him or her, and these differences corresponded to the cultural orientation—the dominant culture or the African-American culture in the United States.

eth, gen, nas, bkg, car (HS)

Penner, David E.; et al. (1997). **Building functional models: Designing an elbow.** *Journal of Research in Science Teaching*, 34(2), 125-143.

Describes a study that investigated the role of a design context for developing children's understanding of science as the construction and revision of models. Results indicate that as early as the first grade, children's model-evaluation skills may be quite amenable to development.

rem, sks, nas, lrg (EL)

Ploetzner, Rolf; Van Lehn, Kurt. (1997). **The acquisition of qualitative physics knowledge during textbook based physics training.** *Cognition and Instruction*, 15(2), 169-205.

Used computerized simulation models of qualitative, conceptual problem solving and quantitative problem solving to examine qualitative physics knowledge acquisition during textbook based physics training.

cbi, pbs, kns, lrg, mat (K-12)

Pole, Christopher J.; et al. (1997). **Supervision of doctoral students in the natural sciences:**

Expectations and experiences. *Assessment & Evaluation in Higher Education*, 22(1), 49-63.

Interviews with doctoral students and supervisors in physics, mathematics, and engineering attending nine English universities investigated student expectations of doctoral supervision, extent to which expectations were met, and the ways in which supervision changes as the doctoral process progresses.

ats, car, ntw (PS)

Polzella, Lugene. (1997). **Gifted students suggest reforms for education: Listening to gifted students' ideas.** *Gifted Child Today Magazine*, 20(4), 30-35.

A survey of 50 students (grades 4-11) returning to a gifted summer program provided several suggestions for regular schools. Suggestions included curriculum related field trips, serving individual student interests, use of college campus facilities, flexible school policies and teacher planning, hands-on science and technology, and opportunities for gifted students to work together.

chs, hos, ats, cur (K-12)

Powell, Richard R. (1997). **Teaching alike: A cross case analysis of first career and second career beginning teachers' instructional convergence.** *Teaching and Teacher Education*, 13(3), 341-356.

This study examined how prior knowledge and experience influenced first career and second career beginning science teachers' curriculum and classroom instruction. Observations and interviews indicated that teachers compromised their beliefs about good content and became similar by the end of the year.

cht, knt, ped, bft, bkg, cur (TE)

Preece, Peter F. W. (1997). **Force and motion: Pre-service and practising secondary science teachers' language and understanding.** *Research in Science and Technological Education*, 15(1), 123-128.

Explores the language used by teachers to denote various forces and investigates possible misconceptions they might hold about force and motion. Results indicate that biology and chemistry specialists hold the most misconceptions.

alf, knt, phy (SE)

Ramey-Gassert, Linda. (1997). **Learning science beyond the classroom.** *Elementary School Journal*, 97(4), 433-450.

Examines a cross-section of craft knowledge and research-based literature of science learning beyond the classroom. Describes informal science education programs, and discusses implications for science teaching, focusing on the importance of informal science learning for children and in-service and preservice teachers. Proposes a model for enhanced science education and policy change.

nfd, lrg (EL, TE)

Raun, William R.; et al. (1997). **Nitrogen cycle ninja: A teaching exercise.** *Journal of Natural Resources and Life Sciences Education*, 26(1), 39-42.

Assesses the effectiveness of using pop quizzes and rewards to improve student retention of the nitrogen cycle. Students able to diagram the N-cycle on pop quizzes were rewarded with special cards that included the N-cycle. These cards could then be used on subsequent tests. Three months later, 6 of 11 students retained the information.

Shymansky, James A.; et al. (1997). **A professional development system as a catalyst for changing science teachers.** *Journal of Science Teacher Education*, 8(1), 29-42.

Describes the development and testing of a Professional Development System (PDS), created in

response to the need to evaluate the Science: Parents, Activities and Literature project. The PDS provides systematic and comparable evidence about curriculum planning, classroom teaching, and leadership that can be used to clarify constructivist practice and document professional growth.

cns, asm, tpd (TE)

Shymansky, James A.; et al. (1997). **Examining the construction process: A study of changes in Level 10 students' understanding of classical mechanics.** *Journal of Research in Science Teaching*, 34(6), 571-593.

Explores students' conceptual understanding and conceptual growth in classical mechanics in the natural context of a Grade 10 science classroom. Findings indicate that students' knowledge structures remained stable for 10 weeks and unchanged for four weeks after instruction ceased.

ccg, cns, phy (SE)

Sing, Lee; Chee, Chia Teck. (1997). **Microcomputer simulated experiments in the teaching of multi-channel laser system in an undergraduate course.** *Journal of Computers in Mathematics and Science Teaching*, 16(1), 25-36.

Describes a simulation done by students in a Year 4 undergraduate physics laboratory course on pulse technology. Results showed that the microcomputer simulated experiments made for a more comprehensive understanding of the multi-channel laser system.

cbl, tec, lrg, phy (PS)

Sitman, Francis X.; et al. (1997). **Hands-on science and basic-skills learning by culturally and academically diverse students: A test of the IALS.** *Journal of Curriculum and Supervision*, 12(4), 356-366.

Summarizes a study to determine effects of the Integrated Activity Learning Sequence (IALS) instructional approach on fourth graders' science, mathematics, and writing achievement; to discover teachers' and students' attitudes toward this approach; and to determine if nonscience elementary teachers could develop science instructional materials.

ped, ats, att, tpd, cur (EL)

Slater, Timothy F. (1997). **The effectiveness of portfolio assessments in science.** *Journal of College Science Teaching*, 26(5), 315-318.

Discusses the use of portfolio assessment strategies for more lengthy, complex, and authentic student assessments. Reports on an investigation to determine the effectiveness of portfolio strategies. Concludes that portfolio assessment procedures enhance conceptual understanding and attitudes towards learning and evaluation in the college science classroom.

asm, lrg, ats (PS)

Smith, Carol; et al. (1997). **Teaching for understanding: A study of students' preinstruction theories of matter and a comparison of the effectiveness of two approaches to teaching about matter and density.** *Cognition and Instruction*, 15(3), 317-393.

Compared Introductory Physical Science (IPS) and Modified approaches to teaching physics concepts. Found that students' preinstruction ideas of matter and density were organized in commonsense theories that constrained understanding of density.

alf, ped, ccg (SE)

Smith, Robin G. (1997). **"Before teaching this I'd do a lot of reading:" Preparing primary student teachers to teach science.** *Research in Science Education*, 27(1), 141-154.

Investigates student teachers' understanding of science and their ability to learn what was needed when it was required for teaching purposes. Findings indicate that half the students were able to prepare themselves adequately through independent research with guidance although their initial background knowledge of science was weak.

knt, tpd (TE)

So, Winnie Wing-Mui. (1997). **A study of teacher cognition in planning elementary science lessons.** *Research in Science Education*, 27(1), 71-86.

Uses a qualitative approach to uncover a teacher's thinking process during planning and to depict a more holistic view of the structural complexity of teacher cognition during lesson planning.

knt, lrg, skt, cur, ped (EL)

Song, Jinwoong; et al. (1997). **Exploring the parallelism between change in students' conceptions and historical change in the concept of inertia.** *Research in Science Education*, 27(1), 87-100.

Investigates students' (n=736) conceptions of inertia and compares these conceptions with historical changes in the concept. Findings indicate considerable similarities as well as dissimilarities between students' conceptions and the views of past scientists.

ccg, his, phe, phy (SE)

Spear, Margaret. (1997). **The influence of contrast effects upon teachers' marks.** *Educational Research*, 39(2), 229-233.

Teachers (n=336) evaluated three samples of written work of differing quality. The sequence of samples was rotated. Good work was assessed more favorably when it followed lower quality work than when it preceded it.

asm, skt, tpd (TE)

Stevens, Reed; Hall, Rogers. (1997). **Seeing Tornado: How video traces mediate visitor understandings of (natural?) phenomena in a science museum.** *Science Education*, 81(6), 735-747.

Reports on an exploratory study of how people see and explain a prominent exhibit (*Tornado*) at an interactive science museum (the Exploratorium). Data was assembled using a novel, technically mediated activity system (Video Traces).

nfd, tec (GEN)

Stow, William. (1997). **Concept mapping: A tool for self-assessment?** *Primary Science Review*, 49, 12-15.

Describes a study to investigate how effectively concept mapping can be used to focus children on their own learning in science and to provide a way of describing their own achievements. Findings indicate that some children were able to identify specific targets for future learning. Motivation and metacognition were the main areas of benefit.

lth, sks (EL)

Stratford, Steven J. (1997). **A review of computer-based model research in precollege science**

classrooms. *Journal of Computers in Mathematics and Science Teaching*, 16(1), 3-23.

Covers research conducted within the past 10 years on the topic of using computer models and simulations to aid science instruction at the precollege level. The research is categorized into three main areas: (1) students running preprogrammed simulations; (2) students creating dynamic models using modeling environments; and (3) students using programming environments to create simulations.

cbi, res (SE)

Summerfield, John. (1997). **Inside the investigative classroom: What's going on?** *Primary Science Review*, 46, 4-7.

Reports and discusses observations of three confident, experienced teachers organizing investigative science in their classrooms. Teachers wore microphones so that recorded data coupled with field notes formed a concise record which could be discussed with the teachers.

inq, cid (EL)

Swann, Joanna; Brown, Sally. (1997). **The implementation of a national curriculum and teachers' classroom thinking.** *Research Papers in Education: Policy and Practice*, 12(1), 91-114.

This study examined the impact of Scotland's national curriculum for students ages 5-14 on: teachers' constructs of their teaching, assumptions about students' learning, and interpretations of and accommodations for student differences.

cur, bft, ref (TE)

Tamir, Pinchas. (1997). **Studying children's conceptions of life: An example of research carried out by preservice science teachers.** *Journal of Science Teacher Education*, 8(4), 241-256.

Details the findings of action research carried out by preservice teachers to ascertain children's (n=418) notions of animism and differentiation between living and nonliving things. Ninety-nine percent of children correctly classified animals as living, 80% correctly classified plants as living and inanimate objects as nonliving, and only 56% classified embryos as living.

alf, kns, res, tpd (TE, EL)

Thoresen, Carol. (1997). **Early career support program: Telecommunication mentoring for rural teachers.** *Journal of Science Teacher Education*, 8(4), 283-293.

Reports on the Montana Educational Telecommunication Network established to connect early career teachers in rural Montana with mentor teachers. Participants reported high levels of satisfaction with the program and showed ample evidence of professional development and collaboration. Recommendations are given.

ntw, tpd, tec (TE)

Tiberghien, A.; de Vries, E. (1997). **Relating characteristics of teaching situations to learner activities.** *Journal of Computer Assisted Learning*, 13(3), 163-174.

Compares collaborative problem solving by learners sitting side by side with computer mediated learning at a distance. Three aspects are studied: high school students' problem solving strategies and interpretation of the teaching situation; their use of components of the situation; and the cognitive processes involved in understanding domain knowledge, energy in physics.

pbs, cpl, edt, kns, lsy, phy (HS)

Tinker, Robert F. (1997). **Student scientist partnerships: Shrewd maneuvers.** *Journal of Science Education and Technology*, 6(2), 111-117.

Explores student-scientist partnerships (SSPs) that help students gain a unique understanding of both the content and the process of science. Discusses the potential of SSPs, the range of SSP activities, a strategy for national impact, the educational importance of SSPs, the research importance of SSPs, and technology as a facilitator.

ntw, edt (K-12)

Toh, Kok-Aun; et al. (1997). **Open-ended investigations: Performance and effects of pre-training.** *Research in Science Education*, 27(1), 131-140.

Investigates students' (n=277) performance and the effects of pre-training on tasks rated high in ambiguity, in particular those where the solution to

the tasks cannot be arrived at through predictable algorithms.

pbs, sks (K-12)

Trumper, Ricardo. (1997). **Learning kinematics with a V-Scope: A case study.** *Journal of Computers in Mathematics and Science Teaching*, 16(1), 91-110.

Studies the effect of V-Scope activities on the performance of 11th-grade students in analyzing kinematics graphs. Results indicate that the V-Scope kinematics laboratory activities can promote kinematics concepts and graphing skills.

edt, lab, sks, phy (HS)

Trumper, Ricardo. (1997). **Applying conceptual conflict strategies in the learning of the energy concept.** *Research in Science and Technological Education*, 15(1), 5-18.

Reports on a study which addresses the implications of instructional strategies that are used to create cognitive disequilibrium in order to achieve conceptual change. Discusses several difficulties in the application of such conceptual change strategies.

csg, ped (SE)

Tunnicliffe, Sue Dale. (1997). **Birds, bees and babies.** *Primary Science Review*, 49, 16-19.

Presents a study designed to determine which particular aspects of pregnancy, birth, and babies were of most interest to 8-year-old children. Children were interested in details of a baby's behavior and development as well as the impact of its arrival on the parents. There were distinct gender differences in those topics which particularly interested boys and girls.

ats, bio, cur, gen (EL)

Ursyn, Anna. (1997). **Computer art graphics integration of art and science.** *Learning and Instruction*, 7(1), 65-86.

The effects of the integration of art and science through instruction in computer art graphics on learning geology were studied with 53 college students and 189 comparisons in the same geology class. Results indicate that building representations of scientific concepts through computer art may improve students' achievement.

Whittemore, C. T.; et al. (1997). **Description and evaluation of methods for the learning of interpersonal, transferable and management skills by students of animal science.** *European Journal of Agricultural Education and Extension*, 3(4), 197-216.

A nine week course attempted to develop the interpersonal, transferable, and management skills of animal science students through team exercises. It was successful in improving most of the 23 skills, but made little or no change in working to schedule, listening, or absorbing spoken information.

sks, ped, cpl (PS)

Whittington, M. Susie; et al. (1997). **Assessment of cognitive discourse: A study of thinking opportunities provided by professors.** *Journal of Agricultural Education*, 38(1), 46-53.

Four observations of 16 agricultural science faculty at work showed that classroom discourse was predominantly at lower cognitive levels. Classes of 51 or more had the fewest higher level thinking opportunities and 400 level courses had the greatest.

cid, lrg (PS)

Wilcox, Kimberly J.; Jensen, Murray S. (1997). **Computer use in the science classroom: Proceed with caution!** *Journal of College Science Teaching*, 26(4), 258-264.

Poses some questions and practical answers to help teachers and students use computers effectively in science classes. Sample questions include: Does the increased use of computers in classrooms inhibit any student's progress toward scientific literacy? and, How do males and females respond differently to computer use in science classrooms?

edt, lit, gen, lrg (PS)

Wilkinson, John W.; Ward, Malcolm. (1997). **The purpose and perceived effectiveness of laboratory work in secondary schools.** *Australian Science Teachers' Journal*, 43(2), 49-55.

Examines student and teacher perceptions about the purpose and effectiveness of laboratory work at Year 10. The views of students and their teacher on the goals, conduct, and assessment of laboratory work were compared. Findings suggest that the relevance of laboratory work to everyday life could be made clearer to students.

lab, bfs, bft, ped, cur (HS)

Williams, Anthony; Williams, P. John. (1997). **Problem-based learning: An appropriate methodology for technology education.** *Research in Science and Technological Education*, 15(1), 91-103.

Describes an innovative teaching project that was implemented for training technology teachers in Australia. Presents a rationale for using a problem-based learning collaborative methodology in technology teacher training.

pbs, tec, cpl, ped, tpd (TE)

Windschitl, Mark. (1997). **Student epistemological beliefs and conceptual change activities: How do pair members affect each other?** *Journal of Science Education and Technology*, 6(1), 37-47.

Describes a study that examined the relationships in achievement between members of dyads who were paired according to epistemological maturity. Also examines the relationship between individual students' epistemological maturity and their understanding of photosynthesis.

cpl, ccg, kns, phe, bio (PS)

Wood, Tandra L. Tyler; Cass, Michael A.; Potter, Les. (1997). **Effects of an outdoor science laboratory program on middle school students.** *ERS Spectrum*, 15(3), 30-33.

Evaluate effects of an outdoor "hands-on," cooperative science laboratory on seventh and eighth grade students' environmental knowledge levels and science processing skills. Results support involving students in lab work allowing them to test hypotheses, conduct experiments, analyze data, and generate conclusions.

fsd, hos, sks, ene, kns, lrg (MS)

Woodruff, Earl; Meyer, Karen. (1997). **Explanations from intra- and inter-group discourse: Students building knowledge in the science classroom.** *Research in Science Education*, 27(1), 25-39.

Examines student discourse in both small and large contexts. Concludes that two forms of discourse (constructive and generative, dialectic and persuasive) effectively promote progressive discourse and thereby facilitate shared coherent explanations of phenomena.

cid, cns (SE)

Woods, Donald R. (1997). **A British team assesses problem-solving skills in the field of design.** *Journal of College Science Teaching*, 26(6), 430-434.

Examines a report, The Assessment of Performance in Design and Technology, that attempts to assess problem solving abilities in the field of design. Describes pilot projects, an extended project, and some test projects. Summarizes a research project on identifying when and where design appears in the school curriculum.

pbs, tec, cur, asm (SE)

Woolnough, Brian E. (1997). **Motivating students or teaching pure science?** *School Science Review*, 78(285), 67-72.

Reports on research which identifies factors, both inside and outside the curriculum, that influence students in choosing whether or not to continue with science.

ats, bkg, cur, car (K-12)

Woolnough, Brian E.; et al. (1997). **Factors affecting student choice of career in science and engineering: Parallel studies in Australia, Canada, China, England, Japan and Portugal.** *Research in Science and Technological Education*, 15(1), 105-121.

Describes studies that utilized questionnaires and interviews to explore the factors affecting the career choices of students. Reveals differences between scientists and non-scientists with regard to their preferred learning styles and relates these differences to career choice and self-perception.

cul, car, lsy, bfs, bkg (SE)

Woolsey, Kristina; Bellamy, Rachel. (1997). **Science education and technology: Opportunities to enhance student learning.** *Elementary School Journal*, 97(4), 385-399.

Describes how technological capabilities such as calculation, imaging, networking, and portability support a range of pedagogical approaches, such as inquiry based science and dynamic modeling.

edt, ped (EL)

Wright, Lynne. (1997). **Five-year study on learning in science: Let's listen to the children.** *Primary Science Review*, 46, 12-14.

Reports a study that tracks the changes in children's ideas about science and scientific concepts through the use of interviews and questionnaires. Students responded to seven questions about science learning, scientists, and their future relationship to science.

bfs, nas, lit, car (EL)

Wubbels, Theo; Brekelmans, Mieke. (1997). **A comparison of student perceptions of Dutch physics teachers' interpersonal behavior and their educational opinions in 1984 and 1993.** *Journal of Research in Science Teaching*, 34(5), 447-466.

Compares student perceptions of their physics teachers' interpersonal behavior and teachers' self-perceptions of their behavior and their opinions about physics education in 1984 and 1993. Results indicate that teachers were more in favor of realistic teaching content in 1993 than in 1984 and behaved less dominantly and more cooperatively in 1993 than in 1984.

Research Papers, Monographs, and Electronic Documents Produced in 1997

Lynda C. Titterington, *The Ohio State University*
Andrea K. Balas, *The Ohio State University*

This section lists 145 papers, monographs and electronic documents in science education research. The papers and monographs were produced in 1997 and abstracted in the ERIC database by the end of July, 1998. The electronic documents are listed as they appeared on the Internet in September or October, 1998. Some URLs are given as search or index screens when actual document URLs are unwieldy. Each entry is coded (see Key to Codes) with one to three major codes (in bold type) and up to three minor codes, as well as the educational level (in parentheses). All entries are indexed by major codes at the end of the volume (see page 103).

Alaska Challenger Learning Center Steering Committee. (1997). *Alaska Challenger Learning Center Feasibility Report*. Kenai, AK: Author. [SE 060 291]

The Challenger Center for Space Science Education uses space exploration as a theme to create a positive learning experience that raises students' expectations of success; fosters in them a long-term interest in math, science, and technology; and motivates them to pursue studies in these areas. This document is a feasibility report for establishing a Challenger Learning Center in the city of Kenai in Alaska.

tec, esg, ats (K-12)

American Association for the Advancement of Science. (1997). *Project 2061: Science literacy for a changing future. Update 1997*. Washington, DC: Author. [SE 059 993]

Reported here are highlights of a year-long evaluation of the influence of "Science for All Americans" and "Benchmarks for Science Literacy." Data for the evaluation were collected through expert interviews, reviews of state science curriculum frameworks and textbooks, telephone and mail surveys, and case studies of reform activities in six states.

ref, cur (ALL)

Bae, Yupin. (1997). *Findings from the Condition of Education 1997 No. 11: Women in mathematics and science*. Washington, DC: National Center for Education Statistics. [SE 060 785]

This essay reviews the most current data on women's progress in mathematics and science achievement.

attitudes, course-taking patterns, and college majors. The research cited here suggests that the gender gap in science and mathematics in the United States appears at grade ten while internationally the gap appears at grade eight.

gen, eqt, ach, ats, car, cul (ALL)

Baker, William P.; Turturice, Michael W. (1997). *Teaching biology by the Internet*. Paper presented at the Annual Meeting of the Arizona Science Teachers Association (Mesa, AZ, October, 1997). [SE 061 036]

The purpose of this paper is to specifically demonstrate the effective application of the Internet in teaching biology. Specific strategies include accessing information via the Internet, effective search assignments, rules for appropriate use of the Internet, creating one's own web page, Internet connectivity, advanced capabilities, and individualizing instruction.

edt, ped, bio (PS, TE)

Bayer Corporation. (1997). *The Bayer facts of science education III: A U.S. student report card on science education. Executive summary*. Pittsburgh, PA: Author. [SE 060 290]

The report highlights research conducted to uncover what the nation's students (ages 10-17) think of their science education, how they would improve it, how they think they learn best, and how they rate their parents and teachers regarding science. Data collection included an in-depth telephone survey on attitudes toward science and science (n=1,016).

ats, bfs, ped (K-12)

Beatty, A. (Ed.). (1997). *Learning from TIMSS: Results of the Third International Mathematics and Science Study: Summary of a symposium. Summary report. (February 3-4, 1997)*. Washington, DC: National Research Council, National Academy Press [Available online]. Retrieved September 26, 1998 from the World Wide Web. [<http://www.nap.edu/search/index.html>]

These conference proceedings address concerns about the research methodology and implications of TIMSS, and encourage innovative and far-sighted exploration of TIMSS resources.

ach, res (K-12)

Beatty, A. (Ed.). (1997). *Taking stock: What have we learned about making education standards internationally competitive? Summary of a workshop. Summary report. (November 6, 1996)*. Washington, DC: National Research Council, National Academy Press [Available online]. Retrieved October 9, 1998 from the World Wide Web. [<http://www.nap.edu/search/index.html>]

This report presents the findings of a workshop to discuss international standards and examine why international criteria are difficult to articulate and apply. Three articles define the meaning of standards, the Australian experience with standards, and teacher practice.

cul, ref, cur (K-12)

Beeth, Michael E.; Hewson, Peter W. (1997). *Learning to learn science: Instruction that supports conceptual change*. Paper presented at the Annual Meeting of the European Science Education Research Association (1st, Rome, Italy, September 2-6, 1997). [SE 060 759]

This article addresses questions of how a teacher can support and facilitate conceptual change in student's thinking. The focus is on the instructional practices of one teacher and includes: description of her instruction; her learning goals; details on the presentation and analysis of data; and student responses to instruction. It concludes that students in this setting learn science content by creating a community of discourse similar to that of a science community.

ccg, ped, cid, cns (K-12)

Bennof, Richard J. (1997). *Science and engineering state profiles: Fall 1996*. Arlington, VA: National Science Foundation. [SE 060 287]

This document includes data from the NSF that detail the geographic distribution of the 1993 U.S. research and development spending total (\$165 billion). Indicators include doctoral scientists and engineers, science and engineering doctorates awarded, science and engineering graduate students and post doctorates in the statistics tables.

res, car (PS)

Blank, Rolf K.; Langesen, Doren. (1997). *State indicators of science and mathematics education 1997. State-by-state trends and new indicators from the 1995-96 school year*. Washington, DC: Council of Chief State School Officers. [SE 061 077]

This report focuses on science and mathematics indicators at state and national levels. The 1997 report presents new state indicators from the 1995-96 school year and examines trends by state from 1990 to 1996 on indicators of: student achievement; content and instruction; and context and conditions for teaching.

ach, cur, ped, bkg (K-12)

Burrill, Gail; Kennedy, Donald. (1997). *Improving student learning in mathematics and science: The role of national standards in state policy*. Washington, DC: National Academy Press [Available Online]. Retrieved September 26, 1998 from the World Wide Web. [<http://www.nap.edu/readingroom/books/isl>]

This book represents a collaboration between NRC's Center for Science, Mathematics, and Engineering Education and the NCTM to analyze current reform efforts. It also recommends policies to guide and support reform in mathematics and science teaching and learning.

ref, ped, cur, lit (K-12)

Bybee, Rodger W. (1997). *Achieving scientific literacy: From purposes to practices*. Portsmouth, NH: Heinemann. [SE 060 988]

This book presents a broad vision for improving science education. At times it is historical and philosophical, and at other times it is concrete and

practical. It addresses a number of issues that the science education community should attend to as it begins to sail toward a worthwhile destination, achieving literacy for all students.

lit, ref, phe, his, sts (K-12)

Campbell, Jay R.; Voelkl, Kristin E.; Donahue, Patricia L. (1997). *Report in brief NAEP 1996 trends in academic progress*. Washington, DC: National Library of Education. [SE 060 847]

This report presents the major results of the NAEP 1996 science, mathematics, reading and writing long-term assessments. These results chart trends going back to the first year in which each NAEP assessment was given: 1969/1970 in science, 1973 in mathematics, 1971 in reading, and 1984 in writing. Trends in average performance over these time periods are discussed for students at ages 9, 13, and 17 for the science, mathematics, and reading assessments.

ach (K-12)

Carr, Kevin Michael. (1997). *A constructivist approach to reflective judgment and science literacy in introductory college science instruction*. Paper presented at the Annual Meeting of the Northern Rocky Mountain Educational Research Association (15th, Jackson, WY, October 3, 1997). [SE 060 899]

An introductory college astronomy course was restructured along constructivist lines to better foster critical thinking about problems in science. Qualitative student data were collected (interviews, coursework, researcher fieldnotes, and learning journals). Students demonstrated significant diversity in the capacity to apply reflective judgment in the context of science.

cns, sks, pbs (PS)

Center for Science, Mathematics, and Engineering Education, National Research Council. (1997). *Improving teacher preparations and credentialing consistent with the National Science Education Standards: Report of a symposium*. Washington, DC: National Academy Press [Available online]. Retrieved September 9, 1998 from the World Wide Web. [<http://www.nap.edu/readingroom/books/itp>]

These conference proceedings include summaries of papers presented at a 1996 National Academy of Sciences symposium to identify and discuss the criteria identified by the Standards for effective science teaching and for effective professional development for teachers of science.

tpd, ref, res (TE)

Chaplin, Duncan D. (1997). *Earnings benefits of math and science in high school*. Paper presented at the Annual Meeting of the American Educational Research Association (Chicago, IL, April 10, 1997). [SE 060 248]

These findings suggest that mathematics skills obtained by the end of high school have a much stronger association with later earnings than science or writing skills.

sks, car, cur (SE)

Cohen, Karen C. (Ed.). (1997). *Internet links for science education: Student-Scientist Partnerships*. New York, NY: Plenum Press. [SE 060 764]

This volume, focusing on Student-Scientist Partnerships (SSPs), illustrates the workings and effectiveness of this new paradigm and growing force in science education. Data gathering and sharing is possible and rapid with the help of the Internet and a variety of technologies. Several SSPs are described in-depth. This book provides an understanding of these programs from multiple perspectives and encourages teachers to become involved in similar efforts.

tec, ntw, ref (PS)

Committee on Undergraduate Science Education, National Research Council. (1997). *Science teaching reconsidered: A handbook*. Washington, DC: National Academy Press [Available online]. Retrieved October 9, 1998 from the World Wide Web. [<http://www.nap.edu/readingroom/books/str>]

This book, written by scientists who are also educators, provides a path to understanding students and helping them grasp the methods of science. The book includes suggestions for having a greater impact in the classroom and provides resources for further research.

ped, tpd (PS, TE)

Council of Chief State School Officers. (1997). *Mathematics and science content standards and curriculum frameworks: States progress on development and implementation, 1997*. Washington, DC: Author. [SE 060 846]

This report describes the changing landscape of framework development and standards-setting in the United States and identifies emerging issues for practitioners and policy makers. The study was conducted with three kinds of data concerning the current situation of state standards and frameworks in mathematics and science. A concept mapping analysis of all state curriculum frameworks and standards documents was completed.

ref (K-12)

Cournaya, Ann; Hernandez, Peggy; Valenzia, Francine. (1997). *Helping students take responsibility for completing the scientific method*. IL: St. Xavier University. [SE 061 060]

Strategies that enable students' use of the scientific method to solve problems during labs and activities are described. The sample included middle school students in a middle class suburban area. Their lack of understanding and application of the scientific method is documented by student/teacher surveys, teachers' lab checklist and observations.

pbs, lab, sks, ped (MS)

Crow, Tracy (Ed.); et al. (1996-1997). *ENC focus for mathematics and science education: New approaches to assessment in science and mathematics*. Columbus, OH: Eisenhower National Clearinghouse. [SE 059 661]

This report serves as a guide to twenty nine instructional materials that utilize some form of alternative assessment and focus on mathematics, science, and integrated topics including one or more of the following means of student assessment: portfolios, journals, interviews, surveys, performance, and rubrics.

asm, tpd (K-12)

Denoya, Laila E. (Ed.); et al. (1997). *The National Science Foundation Summer Science Camps: Leaving a legacy of successes*. Arlington, VA: National Science Foundation. [SE 060 236]

This book describes the legacy of success of Summer Science Camps which are no longer funded by the NSF. These camps engaged young participants in the process of learning by doing, and encouraged students to think of mathematics and science as disciplines connected with their lives and communities and to construct experiences that promote personal scientific knowledge.

nfd, hos, sts, kns (GEN)

Directorate for Education and Human Resources, National Science Foundation. (1997). *Local systemic change project directory*. Arlington, VA: Author. [SE 060 749]

This directory focuses on a subset of teacher enhancement projects that engage entire school districts in the reform of science, mathematics, and technology education. Systemic change projects are characterized by a shift in the focus from the professional development of the individual teacher to the professional development of all teachers within the whole school organization.

tpd, ref (K-12, TE)

Doig, Brian. (1997). *What makes scientific dialogue possible in the classroom?* Paper presented at the Annual Meeting of the American Educational Research Association (Chicago, IL, March, 1997). [SE 060 856]

The research was designed to investigate ways in which practical activities can be used to foster links between upper elementary children's spontaneous concepts and Newtonian mechanics. The conclusions are presented as evidence for describing the group as engaging in scientific dialogue and for inferring solutions to the pedagogical issues raised by this video episode.

cid, ccg, ped (EL)

Ediger, Marlow. (1997). *Affective objectives in the science curriculum*. U.S.: Missouri. [SE 060 514]

Teaching teams of student teachers and cooperating teachers stressed student involvement in science curriculum development. They worked out a set of learning centers whereby students individually chose which tasks to pursue and which to omit in an ongoing science unit of study. Students achieved

more optimally when democracy was practiced in the classroom.

cur, ref, bfs (ALL)

Ediger, Marlow. (1997). *Excellence in the science curriculum*. U.S.: Missouri. [SE 059 770]

Science teachers need to select tenets from the philosophy of education which stress students attaining vital content, abilities and attitudes. In this paper, diverse schools of philosophical thought are discussed in terms of how each might relate to improving the science curriculum.

phe, ref, cur, pbs, ped (ALL, TE)

Eisenhower National Clearinghouse. (1997). *The National Network of Eisenhower Regional Consortia and National Clearinghouses Mathematics and Science Education: 1997 report*. Columbus, OH: Author. [SE 059 667]

This report describes how the National Network of Eisenhower Regional Consortia and National Clearinghouse are accomplishing their stated objectives. Each section uses activities in a variety of geographic regions to highlight the services that are provided through the Consortia and Clearinghouses.

nfd, tpd, mat, ntw (GEN)

Erduran, Sibel. (1997). *Reflections on the proceedings from HPSST Conferences: A profile of papers on chemistry education*. Paper presented at the International History, Philosophy and Science Teaching, North and South America Regional Conference (Calgary, Canada, June 21-24, 1997). [SE 060 595]

Conference papers with chemistry education emphasis are investigated. The results indicate that papers with physics content dominate. Chemistry and biology content were addressed at about the same frequency. The chemistry topics covered in the papers include air pressure, equilibrium, atomic theory, and periodicity.

his, che, phe (SE, PS)

Falk, Joni; Drayton, Brian. (1997). *Dynamics of the relationships between science teachers and scientists in an innovative mentorship*

collaboration. Paper presented at the Annual Meeting of the American Educational Research Association (Chicago, IL, March, 1997). [SE 060 597]

This paper addresses the emerging relationship between teams of high school science teachers and ecologists who were paired in a year long collaborative endeavor. The teachers and ecologists agreed on the kinds of benefits exchanged, but rank them differently in importance. Science content learning was an important value derived from this collaboration, more lasting were impact on teachers' self-perceptions and practice and from the connection to the scientists' culture. The scientists benefit from teachers' engagement with their work.

ntw, lrg, tpd (TE)

Groves, Susie. (1997). *Making progress through scientific dialogue*. Paper presented at the Annual Meeting of the American Educational Research Association (Chicago, IL, March, 1997). [SE 060 858]

This paper analyzes a segment of videotape showing a group of upper elementary children discussing data obtained from a practical activity where the data conflict with their intuitive models of motion. The analysis attempts to demonstrate the extent to which the dialogue is an example of "progressive classroom discourse" in terms of the notion of generating new understandings for participants.

cid, lrg (EL)

Harris, Julia (Ed.). (1997). *Professional development for math and science. ENC Focus, 4(4), 1997*. Columbus, OH: Eisenhower National Clearinghouse. [SE 060 755]

This issue presents 31 resources related to professional development in mathematics and science education. The resources featured in this issue were selected from the existing collection at ENC and can be used in a variety of settings: from self study to group study; in consultation with peers and supervisors; and as part of an inquiry into practice or an action research project.

tpd, mat (TE)

Harris, Julia (Ed.). (1997). *SSRP: Software for problem solving and inquiry in grades K-4. Special*

issue of the ENC Focus series. Columbus, OH: Eisenhower National Clearinghouse. [SE 060 754]

The SchoolNet Software Review Project (SSRP) created an evaluation process and with expert teacher evaluators throughout Ohio, compiled a database of results. This report presents the results of the evaluation of 127 mathematics and science software programs. Thirty items were chosen to provide a balanced sampling of reviewed titles in terms of Average SSRP Score, price, and grade level and are presented by emphasizing their availability, abstract, SSRP evaluators' comments, and system requirements.

edt, pbs (EL)

Harris, Julia (Ed.). (1997). *Using children's literature in math and science. ENC Focus; 5(5) 1997.* Columbus, OH: Eisenhower National Clearinghouse. [SE 060 947]

Literature is one of the disciplines that can meaningfully be integrating mathematics and science. One way to think of the connection between children's literature and mathematics is to consider how fictional literature might influence kids' thinking about the issues that are involved in the scientific enterprises. This volume presents resources related to this issue in three sections.

int, sts, mat, ped. tpd (K-12)

Hollweg, Karen S. (1997). *Are we making a difference? Lessons learned from VINE Program evaluations.* Troy, OH: North American Association for Environmental Education. [SE 059 848]

The purpose of this document is to describe the evaluations conducted to determine the effectiveness of the VINE Program, and to relate what was learned about the evaluation process and the programs themselves. The focus is on a summative evaluation's questions regarding the impact of the program and whether it is accomplishing what had been intended.

ene, hos, asm (EL)

Howard Hughes Medical Institute. (1997). *Assessing science pathways: Tracking science education and careers from precollege through professional levels. Undergraduate program.* Howard Hughes Medical Institute Directors Meeting (September 30-October 2, 1996). [SE 060 624]

The results presented here are from a meeting of undergraduate biology departments who receive funding from the Howard Hughes Medical Institute. The discussions focus on assessment; predictors of student success in science; the importance of undergraduate research; career choices; women and underrepresented minorities; encouraging interdisciplinary collaborations; and teacher education and professional development programs for preservice, inservice, and precollege teachers.

cur, car, ntw, tpd, gen, asm (PS)

Jarrett, Denise. (1997). *Inquiry strategies for science and mathematics learning: It's just good teaching.* Portland, OR: Northwest Regional Educational Laboratory. [SE 060 765]

Teachers need to know how and when to use a variety of strategies for inquiry learning. This publication is intended to furnish K-12 teachers with both research-based rationale and recommendations for effective techniques that can be applied in today's complex and changing classrooms.

ref, inq, ped (K-12)

Kennedy, Mary. (1997). *Defining optimal knowledge for teaching science and mathematics. NISE Research Monographs.* Madison WI: Wisconsin Center for Educational Research. Retrieved October 1, 1998 from the World Wide Web. [http://www.wcer.wisc.edu/NISE/Research_Monographs/RM10-Defining_Optimal_Know.html]

This literature review discusses good teaching practice and what teachers need to know to be able to teach math and science well. Types of knowledge identified include conceptual understanding, pedagogical content knowledge, and subject-specific beliefs and attitudes.

knt, ped, res, att, bft, skt (TE, K-12)

Kirst, Michael W.; Bird, Robin L. (1997). *The politics of developing and maintaining mathematics and science curriculum content standards. NISE Research Monographs.* Madison WI: Wisconsin Center for Educational Research. Retrieved October 1, 1998 from the World Wide Web. [http://www.wcer.wisc.edu/NISE/Publications/Research_Monographs/RM2-Politics_of_Developing.html]

This paper discusses two issues related to math and science curriculum standards: the allocation of curriculum content, and the political issues involved in systemic change. Strategies for gaining assent to national, state, and local content standards are analyzed.

ref, cur, bkg (GEN)

Knapp, Michael S. (1997). *Between systemic reforms and the mathematics and science classroom: The dynamics of innovation, implementation, and professional learning. NISE Research Monographs*. Madison WI: Wisconsin Center for Educational Research. Retrieved October 1, 1998 from the World Wide Web. [http://www.wcer.wisc.edu/NISE/Publications/Research_Monographs/RM1-Dynamics_of_Innovation.html]

This monograph reviews studies and analyses of large-scale systemic reform initiatives aimed at mathematics and science education, especially those undertaken by state governments and the National Science Foundation.

res, ref (K-12)

Lee, Patrick. (1997). *A first year evaluation study of integrated math and integrated science curricular programs in an inner city high school*. U.S.: California. [SE 060 953]

Findings from a first year evaluation of Integrated Math and Integrated Science curricular programs implemented at Polk Academy, a high school in the San Francisco Bay area (approximately 90% students of color) are presented. Promotion of scientific literacy, critical thinking, and communication skills was the goal of the integrated program.

int, lit, sks, cur, ref (HS)

Lesgold, Alan; Feuer, Michael J.; Black, Allison M. (Eds.). (1997). *Transitions in work and learning: Implications for assessment*. Washington, DC: Board on Testing and Assessment, National Research Council, National Academy Press [Available online]. Retrieved October 9, 1998 from the World Wide Web. [<http://www.nap.edu/search/index.html>]

In this book, researchers address the mismatch between skill requirements of the workplaces and the skills acquired by students in school, the validity of existing assessment technologies, and ethical and

legal issues in the implementation of new testing and certification programs.

sks, car, asm, kns (GEN)

Lokan, Jan; Ford, Phoebe; Greenwood, Lisa. (1997). *Maths and science on the line: Australian middle primary students' performance in the Third International Mathematics and Science Study*. Melbourne, Victoria: Australian Council for Educational Research. [SE 060 752]

The contents of the report include: the introduction, international results, results within Australia, achievement in the mathematics content areas, achievement in the science content areas, performance assessment and performance expectations, curriculum factors, teachers and schools, and policy perspectives.

ach, cur, cul, ref (K-12)

Lowery, Lawrence F. (1997). *NSTA pathways to the science standards: Guidelines for moving the vision into practice. Elementary school edition*. Arlington, VA: National Science Teachers Association. [SE 060 463]

This book includes a general discussion about the learning capabilities of students in various grade levels followed by discussions of selected content areas with practical suggestions, including assessment options, for bringing the specific content area into the classroom. Vignettes are presented as examples of how some of the Standards might be implemented using a variety of approaches adaptable to many different settings.

lrg, ped, ref, tpd (EL)

Marek, Edmund A.; Cavallo, Ann M. L. (1997). *The learning cycle: Elementary school science and beyond. revised edition*. Portsmouth, NJ: Heinemann. [SE 060 280]

This book is about the learning cycle that moves children through a scientific investigation by allowing them first to explore materials, then to construct a concept, and finally to apply this concept to new ideas. It includes integrated learning cycles and learning cycles across the disciplines and the uses of various questioning strategies, alternative evaluation schemes, and modern technologies.

lth, ped, ref, tpd (EL)

Mashhadi, Azam. (1997). *Figurative thinking and the nature of physics*. Paper presented at the Annual International Conference on Thinking (7th, Singapore, June 1-6, 1997). [SE 061 022]

Physicists have created a language in which the fundamental components and symmetries of the world cannot be observed; it has to be made intelligible using figurative language-analogy and metaphor. Following an analysis of the nature of metaphors, analogies and models some results of an empirical investigation of students' conceptions of figurative language are described.

cid, rem, kns, phe, phy (GEN)

Mashhadi, Azam; Han, Christine. (1997). *21st century thinking and science education*. Paper presented at the Annual International Conference on Thinking (7th, Singapore, June 1-6, 1997). [SE 061 021]

Science teaching has a major role in molding students' world views by providing concepts that impose some meaning on the world. Science education should speed up the rate of diffusion of current scientific insights about the nature of reality.

phe, cur (GEN)

Mashhadi, Azam; Woolnough, Brian. (1997). *Dualistic thinking underlying students' understanding of quantum physics*. Paper presented at the Annual International Conference on Thinking (7th, Singapore, June 1-6, 1997). [SE 061 020]

The relationships between students' conceptions (at the level of the population group) of quantum phenomena are investigated using a structured questionnaire and multivariate analytical techniques. A novel quantitative methodology is used to probe students' qualitative implicit understanding. The findings confirm the primacy of dualism in students' thinking.

alf, phe, phy, kns (K-12)

McNeely, Margaret E. (Ed.); et al. (1997). *Guidebook To Examine School Curricula*. Washington, DC: Office of Educational Research and Improvement. [SE 060 943]

The *Guidebook* sets forth five different methods of analyzing curricula. Methods vary in their depth of

analysis; the time/resources necessary; their potential uses; the type of information/conclusions that can be obtained; and in their focus on the needs of diverse learners.

cur, asm, eqt (K-12)

Miller-Whitehead, Marie. (1997). *An analysis of science scale scores for grades 2-8 in Tennessee for 1990-1994*. U.S.: Alabama. [SE 060 722]

This research intends to answer the following questions: is there evidence of more equity and value-added in student scores?; was variability in scores decreasing?; how do scores compare across years and grade levels?; and, what are the implications for curriculum and assessment reforms? The null hypothesis of the investigation was that there is no difference in science scale scores across years or grade levels.

ach, eqt, asm, cur (EL)

Miller-Whitehead, Marie. (1997). *A longitudinal analysis of science scale scores grades 2-8 in Tennessee for 1992-1996*. U.S.: Alabama. [SE 060 860]

This is a follow-up to an earlier study conducted using state of Tennessee data for student scale scores in science for the years 1990-4 revealing an increase in the mean of science scale scores for grades 2-8 each year. This population represents the remaining members of the 1991 student cohort. The finding seems to indicate that teacher effect on student achievement may be both cumulative and residual.

ach, ref (EL)

Miller-Whitehead, Marie. (1997). *Tennessee TCAP science scale scores 1990-1997: Implications for continuous improvement and educational reform*. U.S.: Alabama. [SE 061 058]

The research goal is to determine the impact of standardized science test scores on student's continuous achievement. The data show a dip in grade 4 but an overall increase in scores. Data are displayed in tables for minimum/maximum science scale scores, mean/five year mean science scale scores, science scale score descriptives, and analysis of variance.

ach, ref, ped, cur (EL)

Mullis, Ina V. S. (1997). *Benchmarking to international achievement*. Washington, DC: Office of Educational Research and Improvement. [SE 060 939]

By highlighting some of the eighth-grade findings from TIMSS, this booklet aims to help readers better understand how TIMSS can serve as a tool for education reform. Policymakers and educators can compare the findings of TIMSS with local student performance and educational practices in order to facilitate reform initiatives.

Murphy, Anthony P.; Coppola, Ralph K. (1997). *GLOBE: A science/education partnership program*. Paper presented at the Annual Meeting of the American Educational Research Association (Chicago, IL, March, 1997). [SE 060 609]

GLOBE engages K-12 students and scientists in collecting and analyzing data and is truly a partnership between science and education. The nature of this partnership is reflected in the various research protocols and learning activities for each grade level and in the fact that the science processes used by researchers are reflections of the inquiry processes used at the K-12 or equivalent level.

National Center for Education Statistics. (1997). *Pursuing excellence: Eighth-grade findings from the Third International Math and Science Study. A video presentation* [Videotape]. Washington, DC: Author. [SE 060 446]

The video highlights the findings from assessing the math and science performance of over 500,000 students in 41 countries at three different grade levels. It summarizes the study's key findings at the eighth-grade level, and includes the views of business leaders, policy makers, educators, and researchers on the study's implications for America's schools. The video summarizes the findings of the TIMSS study with respect to four topics: curriculum and learning expectations, teaching, teachers' and students' lives.

National Education Goals Panel. (1997). *The National Education Goals report: Building a nation of learners 1997*. Washington, DC: Author. [SE 060 986]

This report highlights student achievement in mathematics and science. After data comparisons of grades 4, 8, and 12 student scores to those in Korea and Singapore, the NEGP proposes three steps to raise achievement levels: set tougher standards that are comparable to the world's best, align all components of the education system with the standards; and strengthen our teachers' subject matter knowledge and teaching skills.

National Education Goals Panel. (1997). *The National Education Goals report summary 1997: Mathematics and science achievement for the 21st century*. Washington, DC: Author. [SE 060 945]

The purpose of this annual report to the nation is to capture the attention of Americans in order to better our schools and increase our expectations for student performance. More than two dozen national core indicators are presented which convey how much progress has been made in each Goal area. This year's highlights include student achievement in mathematics and science, two of the core academic subjects in which we expect all students to demonstrate competency.

Ponzio, Richard C.; Peterson, Kenneth D. (1997). *Adolescents as effective teachers of child science*. Paper presented at the Annual Meeting of the Northern Rocky Mountain Educational Research Association (15th, Jackson, WY, October 3, 1997). [SE 060 900]

The purpose of this study of the 4-H Youth Experiences in Science Project is to illuminate the interactions and other dynamics of adolescents as teachers in a science curriculum that was planned to use the teens as primary instructional source teachers, rather than merely as tutors. This study found that the nature of child science (the instructional goal) was particularly well suited to the instructional strengths of teenagers.

ntw, nfd, ped, sks (EL, HS)

Project Kaleidoscope. (1997). *The question of reform: Report on Project Kaleidoscope 1996-1997*. Washington, DC: Author. [SE 060 537]

Over the past decade, undergraduate colleges and universities of all sizes in all parts of the country, public and private, have begun to pursue reform for the sciences and mathematics. The report is a distillation of questions that successful reformers have asked, including the key sets of questions which institutions successful in conceiving, implementing and sustaining reform have addressed.

Rodriguez, Alberto J. (1997). *Counting the runners who don't have shoes: Trends in student achievement in science by socioeconomic status and gender within ethnic groups. NISE Occasional Papers.* Madison WI: Wisconsin Center for Educational Research. Retrieved October 1, 1998 from the World Wide Web. [http://www.wcer.wisc.edu/NISE/Publications/Research_Monographs/Rm3-Counting_the_Runners.html]

This results of this meta-analysis indicate that there has been some improvement in the achievement of traditionally underserved students. By understanding the students' point of view, educators can identify factors that influence success and design effective intervention programs.

ach, eqt, gen, eth, ped (K-12)

Rubba, Peter A. (Ed.); et al. (1997). *Proceedings of the 1997 Annual International Conference of the Association for the Education of Teachers in Science.* PA: Association for the Education of Teachers in Science. [SE 060 318]

These proceedings of the 1997 Annual International Conference of the Association for the Education of Teachers in Science (AETS) include a copy of the conference program and 43 papers and presentation summaries from the meeting, ordered by conference session.

res (ALL)

Schau, Candace; et al. (1997). *Use of fill-in concept maps to assess middle school students' connected understanding of science.* Paper presented at the Annual Meeting of the American Education Research Association (Chicago, IL, March 1997). [SE 060 340]

This paper is based on the belief that knowledge must be organized in order to be accessible from long term memory and this kind of organization requires connected understanding. Findings indicate that the select-and-fill-in concept map format can be used with ethnically diverse middle school students to measure their connected understanding of science.

kns, asm, eth, lth (MS)

Scottish Office Education and Industry Department. (1997). *Achievements of primary 4 and primary 5 pupils in mathematics and science.* Edinburgh, Scotland: Author. [SE 060 553]

This document reports on the performance of Scottish primary students in mathematics and science. Students scored below the international average in mathematics and are ranked in the lower half of the range of countries involved in the study. In science, students scored above the international average and are ranked in the middle.

Springer, Leonard; Stanne, Mary E.; Donovan, Samuel S. (1997). *Effects of small-group learning on undergraduates in science, mathematics, engineering, and technology: A meta-analysis. NISE Research Monographs.* Madison WI: Wisconsin Center for Educational Research. Retrieved October 1, 1998 from the World Wide Web. [http://www.wcer.wisc.edu/NISE/Publications/Research_Monographs/index.html]

This meta-analysis demonstrates that various forms of small-group learning are effective in promoting greater academic achievement, more favorable

attitudes toward learning, and increased persistence through science, math, engineering and technology courses and programs.

cpl, ach, ats (PS)

Stepanek, Jennifer. (1997). *Science and mathematics standards in the classroom: It's just good teaching*. Portland, OR: Northwest Regional Educational Laboratory. [SE 060 766]

Although the standards are not new, they have not been fully implemented and there are many indications that teachers need more information about them. This publication summarizes the vision and rationale presented in the national standards documents and current literature on the topic. Strategies and resources for implementing a standards-based teaching approach are the main focus of this report.

ref, ped (K-12, TE)

Stepanek, Jennifer; Jarrett, Denise. (1997). *Assessment strategies to inform science and mathematics instruction: It's just good teaching*. Portland, OR: Northwest Regional Educational Laboratory. [SE 061 102]

Changes in assessment practices are central to ongoing reform efforts in science and mathematics education. This document includes a summary of the research and current literature on the topic, a discussion of effective strategies, and an annotated listing of organizations and resources, both print and electronic.

ref, asm (K-12)

Summers, Mike; Kruger, Colin; Mant, Jenny. (1997). *Teaching electricity effectively: A research-based guide for primary science*. Herts, England: Association for Science Education. [SE 060 713]

The book is based on in-depth case studies of the teaching of electricity by three primary school teachers in which children's understanding was investigated before and after teaching. The research identified a set of electricity concepts that can be acquired readily by primary school teachers and taught effectively to children. The research also indicated numerous ways in which teachers can develop children's ideas successfully and some of the pitfalls to be avoided.

Tobias, Sheila. (1997). *Some recent developments in teacher education in mathematics and science: A review and commentary. NISE Occasional Papers*. Madison WI: Wisconsin Center for Educational Research. Retrieved October 1, 1998 from the World Wide Web. [http://www.wcer.wisc.edu/NISE/Publications/Occasional_Papers/OP4-Recent_Developments.html]

This literature review of teacher education compares the relationships between mathematics and science education with respect to the math and science departments. The author recommends including pedagogy and content in teaching methods courses.

tpd, ped, cur (TE)

Tobias, Sheila; Raphael, Jacqueline. (1997). *The hidden curriculum— Faculty-made tests in science. Part 1: Lower-division courses*. New York: Plenum Press. [SE 060 762]

Exemplary innovations in exam practices that assess scientific understanding in new and more appropriate ways are detailed in this book. The research described and the resulting hundreds of best exam practices in all science courses at the college level is a much needed resource for every science educator and administrator.

asm (PS)

Tobias, Sheila; Raphael, Jacqueline. (1997). *The hidden curriculum— Faculty-made tests in science. Part 2: Upper-division courses*. New York: Plenum Press. [SE 060 763]

This volume is premised on the belief that testing practices influence educational procedures and learning outcomes. Exemplary innovations in exam practices that assess scientific understanding in new and more appropriate ways are detailed in this book. The research and resulting compendium of exam practices in graduate level science courses is a much needed resource for science educators and administrators.

asm (PS)

University of North Carolina Mathematics and Science Education Network. (1997). *MSEN long-range goals*. Chapel Hill, NC: Author. [SE 059 984]

MSEN applies the resources of UNC to strengthen mathematics and science education in schools throughout the state. The faculty direct center operations and provide K-12 teachers with professional development offerings by bringing them into contact with university faculty, scientists, and other professionals, and exposing them to the current educational research.

ntw, tpd (ALL)

University of North Carolina Mathematics and Science Education Network. (1997). *A shared vision for mathematics and science education in North Carolina*. Chapel Hill, NC: Author. [SE 059 992]

The North Carolina Mathematics and Science Coalition is an organization of education, public policy, civic, community, and business leaders working to stimulate and promote efforts to implement systemic reforms in mathematics and science education. The purpose is to focus the efforts of diverse groups of stakeholders working together to bring excellence to mathematics and science education.

ntw, ref (ALL)

Wagner, Elaine. (1997). *Environmental attitudes in the elementary grades: A bibliographic essay*. U.S.: Georgia. [SE 060 557]

Ecological or environmental programs integrated into science courses in the elementary grades can make children aware that they can have either a positive or negative effect on their environment. This bibliography was compiled from articles and dissertations on environmental education and

children's awareness, attitudes, and perceptions toward the natural environment.

ats, ene, res (EL)

Wallace, Raven; Kupperman, Jeff. (1997). *On-line search in the science classroom: Benefits and possibilities*. Paper presented at the Annual Meeting of the American Educational Research Association (Chicago, IL, March 24-28, 1997). [SE 060 160]

This study addresses some basic questions about students' strategies for seeking and using information from the World Wide Web. From the results, it is clear that the students are not engaged and thoughtful by virtue of being on-line. The students are constrained and this may be connected to their consistent reduction of the task to finding an answer or a perfect source.

sks, edt, kns (K-12)

Webb, Norman L. (1997). *Criteria for alignment of expectations and assessments in mathematics and science education. NISE Research Monographs*. Madison WI: Wisconsin Center for Educational Research. Retrieved October 1, 1998 from the World Wide Web. [http://www.wcer.wisc.edu/NISE/Research_Monographs/RM6-Criteria_for_Alignment.html]

This monograph identifies criteria for judging the alignment between expectations and assessments central to current efforts of systemic and standards-based education reforms in mathematics and science.

ref, asm, cur (K-12)

Webb, Norman L. (1997). *Determining alignment of expectations and assessments in mathematics and science education. NISE Briefs, 1(2)*. Madison WI: Wisconsin Center for Educational Research. Retrieved October 1, 1998 from the World Wide Web. [http://www.wcer.wisc.edu/NISE/Publications/Briefs/Vol_1_No_2]

This research brief, intended for those who seek to improve student learning by creating coherent systems of expectations and assessments in states and districts, examines the concept of alignment and is required for expectations and assessments to be in alignment.

ref, asm, cur (K-12)

Weiss, Iris R. (1997). *The status of science and mathematics teaching in the United States: Comparing teacher views and classroom practice to national standards. NISE Briefs, 1(3)*. Madison WI: Wisconsin Center for Educational Research. Retrieved October 1, 1998 from the World Wide Web. [http://www.wcer.wisc.edu/NISE/Publications/Briefs/Vol_1_No_3]

This research brief reports the results of a 1993 survey that compared teacher's classroom practice to the national standards for math and science education. Instructional issues include: time spent on these subjects, classroom activities, and the context for science and math teaching.

ref, ped, tpd (K-12)

Whitin, Phyllis; Whitin, David J. (1997). *Inquiry at the window: Pursuing the wonders of learners*. Portsmouth, NH: Heinemann. [SE 059 702]

This book is about inquiry learning during a year-long classroom exploration with 4th graders who set up a bird feeder and recorded observations in a journal. The role of teachers should be to highlight problems that learners encounter and to support them in devising appropriate strategies and possible solutions to problems.

inq, ped, pbs (EL, TE)

Williams, Julian. (1997). *Scientific dialogue as evidence of learning*. Paper presented at the Annual

Meeting of the American Educational Research Association (Chicago, IL, March, 1997). [SE 060 857]

This paper looks at the evidence of learning in children engaged in small-group discussion with a teacher. Motives of the participants in this dialogue are analyzed, and the teaching-learning process is considered to be the resolution of productive misunderstandings between everyday notions and scientific notions. The concluding discussion draws implications and raises questions about the role of the teacher in scientific dialogue.

cid, lrg (EL)

Yore, Larry D. (1997). *Leadership interns in undergraduate elementary school science education programs*. Paper presented at the Annual Meeting of the School Science and Mathematics Association (Milwaukee, WI, November 13-15, 1997). [SE 061 013]

This action research focus was the teaching internship in science. The internship's effectiveness was documented with program's artifacts: interns' unit /lesson plans, class hand-outs; professors' journal notes; classroom observations; school principal/classroom teacher comments; and course evaluations. Qualitative analyses revealed the positive and negative aspects of this internship.
